If well is directionally drilled, give subsurface locations and measured and true vertical depths for all markers and zones pertinent to this work.)\*

Devon Energy was unable to remove the un-cemented Fruitland Coal 5.5" liner as planned after 1.5 days of jarring. On 4/24/01 at 8:00 AM Devon requested and was granted verbal approval from Steve Mason to sidetrack and re-drill the open hole Fruitland Coal interval. Devon's intentions are to set a 7" drillable bridge plug at 2813' KB, ( Fruitland Coal Top at 2741' GL). The whipstock tool will be set at 2812.5' KB. The whipstock will have an 7' window with the bottom at 2809' KB. The new sidetrack Fruitland Coal open hole interval will be drilled with a 3 degrees from vertical kickoff angle.

The new open hole will be drilled with 6 1/4" bit to the top of the Pictured Cliffs formation and under-reamed if hole conditions permit to 11" in diameter. The re-cavitation process will last approximately 15 days. The new un-cemented, perforated 5 1/2" liner will be run across the open hole interval.

14. I hereby certify that the foregoing is true and correct.
