The elevation of the derrick floor above sea level is _____ ft. Ground level 5825

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

We propose to drill a well at the above location through the Torito formation anticipated at a depth of 1996' to an approximate total depth of 2096'. We will set and cement to the surface 180' 8-5/8" 24# J-55 casing with 50 sacks, and approximately 2100' 4-1/2" 9.50# J-55 casing will be set through the Torito with 100 sacks perforated at the proper interval, and sand fraced.

Electrical surveys will be run to total depth.

All work will be done in accordance with the Rules and Regulations of the U.S.G.S and New Mexico Oil and Gas Conservation Commission.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
