	DETAILS OF WORK	Dist. 5
(State names of and expected depths t	to objective sands; show sizes, weights, and lengths of proposed casings; indicate ing points, and all other important proposed work) and the drill with rotary tools to a depth of	100+ feet,
It is proposed to the top of run electric log and proposed to cament the vith 50 sex. It is put base of the Point on cament, it is proposed them free through and place on pump uniting free oil. The Si	to objective sands; show sizes, weights, and lengths of proposed casings; indicating points, and all other important proposed work) seed to drill with rotary tools to a depth of cases to surface with 100 sex. Thereafter the fractured Gallup producing some, estimate run 5½" casing with a 2-stage BV comenting the first stage with 50 sex and to coment the proposed to place the BV tool approximately a Lockout formation. After waiting a minimum posed to drill in with rotary using all as a casing with 42,000 gallons of crude and the til daily rate of production is established all daily rate of production is established all aits. Estimated total depth, 2,900 feet	to drill with ed at 2000s, seel. It is second stage .00 feet below a of 24 hours rilling fluid in run tubing after recover- more or less, t.
It is proposed set 8 5/8" casing and retary to the top of run electric log and proposed to cament the with 50 sex. It is put the base of the Point on cament, it is proposed them free through and place on pump uniting free oil. The Si is dedicated to the runners party.	to objective sands; show sizes, weights, and lengths of proposed casings; indicate ing points, and all other important proposed work) seed to drill with rotary tools to a depth of cases to surface with 100 sex. Thereefter the fractured Gallup producing some, estimate run 5½" easing with a 2-stage BY comenting the first stage with 50 sex and to coment the proposed to place the BY tool approximately the Lockout fermation. After waiting a minimum product to drill in with rotary using oil as decreased to drill in with rotary using oil as decreased to drill in the case of crude and the casing with 42,000 gallons of crude and the til daily rate of production is established at 48/4 of the section, containing 40 acres	to drill with ed at 2000s, seel. It is second stage .00 feet below a of 24 hours rilling fluid in run tubing after recover- more or less, t.
It is proposed to the top of run electric log and proposed to cament the vith 50 sex. It is put the base of the Point on cament, it is proposed then free through and place on pump uniting free oil. The Si	to objective sands; show sizes, weights, and lengths of proposed casings; indicating points, and all other important proposed work) seed to drill with rotary tools to a depth of cases to surface with 100 sex. Thereafter the fractured Gallup producing some, estimate was 5½" easing with a 2-stage BV comenting the first stage with 50 sex and to coment the proposed to place the BV tool approximately a Lockout formation. After writing a minimum produce to drill in with rotary using all as deceasing with 42,000 gallons of crude and the til daily rate of production is established all daily rate of production is established well site. Estimated total depth, 2,700 feet well site. Estimated total depth, 2,700 feet was considered approval in writing by the Geological Survey before operations.	to drill with ed at 2000s, seel. It is second stage .00 feet below a of 24 hours rilling fluid as run tubing after recover- more or less, t.
It is proposed to the top of run electric log and proposed to cament the with 50 sex. It is put the base of the Point on cament, it is proposed than free through and place on pump uniting free oil. The Si is dedicated to the runners party.	to objective sands; show sizes, weights, and lengths of proposed casings; indicating points, and all other important proposed work) seed to drill with rotary tools to a depth of cases to surface with 100 sex. Thereefter the fractured Galiup producing some, estimate run 54" easing with a 2-stage BY comenting the first stage with 30 sex and to coment the proposed to place the BY tool approximately tookout fermation. After writing a minimum product to drill in with rotary using cil as do casing with 42,000 sallone of crude and the til daily rate of production is established 2/4 HE/4 of the section, containing 40 acres well site. Betimeted total depth, 2,200 fee or when the continuous containing to acres well site. Betimeted total depth, 2,200 fee or must receive approval in writing by the Geological Survey before operation.	to drill with ed at 2000s, seel. It is second stage .00 feet below a of 24 hours rilling fluid as run tubing after recover- more or less, t.
It is proposed to the top of reserve to the top of reserve log and proposed to cament the vith 50 sax. It is put the base of the Point on cament, it is proposed them free through and place on pump uniting free oil. The Si is dedicated to the reserve the place of the reserve the same than the same through the sa	to objective sands; show sizes, weights, and lengths of proposed casings; indicating points, and all other important proposed work) seed to drill with rotary tools to a depth of cases to surface with 100 sex. Thereefter the fractured Galiup producing some, estimate run 54" easing with a 2-stage BY comenting the first stage with 30 sex and to coment the proposed to place the BY tool approximately tookout fermation. After writing a minimum product to drill in with rotary using cil as do casing with 42,000 sallone of crude and the til daily rate of production is established 2/4 HE/4 of the section, containing 40 acres well site. Betimeted total depth, 2,200 fee or when the continuous containing to acres well site. Betimeted total depth, 2,200 fee or must receive approval in writing by the Geological Survey before operation.	to drill with ed at 2000s, seel. It is second stage .00 feet below a of 24 hours rilling fluid as run tubing after recover- more or less, t.
