DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

This water injection well is presently completed only in the Upper Gallup formation. We propose also to inject water into the Lower Gallup, by cutting a notch at 2425-2430' on and fracturing with water containing 20,000# of 14/20 mesh sand.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
