ARCO Oil and Gas Company respectfully requests approval of long term shutstatus on this well. At this time, under the current waterflood operation, Af cannot economically operate the subject well. An ongoing study to determit the feasibility of CO2 flooding for the Horseshoe Gallup Field is underway, whi may yield significant additional oil recovery. Implementation of a CO2 flowould require the workover of existing wells, and the drilling of new well for this reason, ARCO proposes that this well be maintained in the long to shut-in status so that the welloore will be available, should it be needed part of a litture CO2 flood. This plan eliminates the economic waste of potential usable well-pores, and promotes conservation. JULIZAGA JU	in RCO ine ich ood s.
