DURANGO CO. N.M.

(INDICATE ABOVE BY CHECK MARK NATURE OF REPORT, NOTICE, OR OTHER DATA)

Well No. 12-13 is located 600 ft. from S line and 600 ft. from W line of sec. 20  
20 North 20 West 12-13  
(1/4 Sec. and Sec. No.) (Twp.) (Range) (Meridian)  
San Juan New Mexico  
(Field) (County or Subdivision) (State or Territory)

The elevation of the derrick floor above sea level is 2070 ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

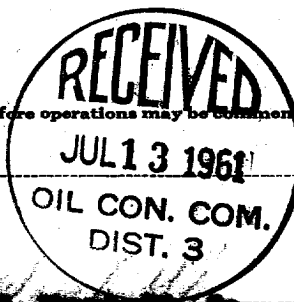

It is proposed to pull casing and plug the subject well. A 30-inch plug will be set covering the open hole and approximately 30' of casing. A 30-inch plug will be set covering the plug on the cut-off portion of the pipe. A 10-inch plug will be set covering the end of the surface casing. A 5-inch plug will be set as a cushion for a cement. In the event we are unable to pull any casing the casing will be filled with sand from the bottom plug to the surface plug. Cement will be pumped from the casing between the surface plug and production pipe to prevent surface water contamination.

The production on this well is now 0.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
