DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

A Halliburton R-3 packer with hydraulic holdown was set at 7195' RMB. Drilling mud was spotted in the annulus behind the packer. A constant pressure of 1000# was imposed under the packer for 5 minutes and during this time the casing remained on a vacuum. As this test determined that no packer leak exists, the annulus was filled completely with mud, casing valves were closed, and the well was completed.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
