The elevation of the ~~derrick floor~~ **G.L.** above sea level is **5985** ft. ~~will be reported~~

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

We intend to drill a well to test the Point Lookout ss in the Mesaverde at approximately 5000'. Another potential gas sand is the Cliff House ss at approximately 4100'. 10 3/4" surface casing will be set at approximately 200' and cemented to surface. 7" production casing will be set at approximately 5100' and cemented sufficiently to protect all producing zones. Side wall cores will be taken where production indicated.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
