Well No. _____ is located 990 ft. from [N] line and 990 ft. from [E] line of sec. 8
31N 13W 100PM
Undesignated San Juan New Mexico
(Field) (County or Subdivision) (State or Territory)

The elevation of the derrick floor above sea level is 5913 ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

230 BLC was swabbed and pumped from the well in 5 days. The pump and bkg were pulled and the well was cleaned out from 5900-5915. The sand pump started sticking in the hole, and an impression block was run to 4964' where a jagged impression was recovered. The seg. was rolled out with a 7" seg. roller from 4964'-4967'. The well was placed on production, but no oil was recovered. The pump, rods, & bkg were again pulled, and the well is presently being cleaned out at 5900'.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
