## DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

Rotary drilling equipment will be used to drill to approximately 1,350', a Sanctus test. Approximately 30' of 7" surface casing will be run and cemented to surface. If production is encountered the required amount of 4 1/2" casing will be run and cemented with sufficient cement to cover the highest potentially productive zone. Mud with properties to maintain good hole condition will be used. All shows will be tested and electric logs will be run prior to setting casing or abandonment. Stimulation treatments may be used in completion.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
