

1. The purpose of this study was to determine the effect of the Gulper-Martin #4 on the growth of the Upper and Lower Zones.

2. The study was conducted over a period of five days, with data collected at intervals of one day.

3. The results of the study show that the Upper Zone growth was significantly higher than the Lower Zone growth.

4. The growth of the Upper Zone was approximately 200 units per day, while the growth of the Lower Zone was approximately 50 units per day.

5. The study concludes that the Gulper-Martin #4 has a positive effect on the growth of the Upper Zone, but a minimal effect on the Lower Zone.
