FARMINGTON, NEW MEXICO

April 15

1963

WELL No. 11 is located 660 ft. from 13N line and 660 ft. from 13W line of sec. 1
SW SW Section 1 13N 13W 13P
 (1/4 Sec. and Sec. No.) (Twp.) (Range) (Meridian)
Ungraded San Juan New Mexico
 (Field) (County or Subdivision) (State or Territory)

The elevation of the derrick floor above sea level is _____ ft.

5,492' Ungraded

APR 29 1963
OIL CON. COM.
DIST. 3

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudlogging jobs, cementing points, and all other important proposed work)

Rotary drilling equipment will be used to drill to approximately 1,325', a Sematite test. Approximately 30' of 7" surface casing will be run and cemented to surface. If production is encountered the required amount of 4 1/2" casing will be run and cemented with sufficient cement to cover the highest potentially productive zone. The well will be drilled with air as circulating fluid. All shows will be tested and logs will be run prior to setting casing or abandonment. Stimulation treatments may be used in completion.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
