53. *Staphylococcus aureus* is a Gram-positive, spherical bacterium that is commonly found on the skin and in the nasal cavity of humans. It is a facultative anaerobe, meaning it can grow in the presence or absence of oxygen. *S. aureus* is a major cause of skin infections, such as abscesses and impetigo, and is also responsible for more serious infections, including pneumonia and sepsis. It is known for its ability to form a biofilm, which allows it to adhere to surfaces and resist antimicrobial treatments.
