Well No. **7** is located **1450** ft. from **N** line and **1400** ft. from **W** line of sec. **2**

NW 1/4 Section 2 **T-32-N** **R-14-W** **NMPN**
(1/4 Sec. and Sec. No.) (Twp.) (Range) (Meridian)

Uta Dena (Paradox) **San Juan** **New Mexico**
(Field) (County or Subdivision) (State or Territory)

The elevation of the derrick floor above sea level is _____ ft. (To be furnished later)

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

We propose to drill the well to approximately 8600'. Rotary tools will be used to total depth. Drill out from under intermediate casing with gas. Anticipate production from the Paradox Formation. Stimulation and completion will be as indicated upon reaching this formation.

The following casing program is proposed:

Size	Depth	Cement	Remarks:
13-3/8"	300'	355 Sx	200% of theoretical amount to fill.
8-5/8"	4000'	270 Sx	150% of theoretical amount to fill.
5-1/2"	8600'	70 Sx	Perlite followed by 50 Sx Neat.

Copies of location plat are attached. A copy of any survey taken will be submitted upon completion of well.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
