Ute Dome Paradox

(Field)

San Juan

(County or Subdivision)

New Mexico

(State or Territory)

The elevation of the derrick floor above sea level is 6005 ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

Total depth 8270', plug back depth 8225'.

It is planned to move in a rotary workover rig to test for suspected casing leaks and repair as indicated. Due to surface gas leaks in the vicinity, well was killed with sand November 16, 1961, and the 5-1/2" - 8-5/8" casing annulus blown down to core with no further pressure build-up

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
