The elevation of the derrick floor above sea level is 5274 ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

Well spudded November 8, 1958. Set 8-5/8" casing at 27' - not cemented. Well drilled to total depth 1207' with rotary tools using air to circulate. While drilling through sand from 1104' to 1116' a show of gas, no oil, was encountered. The 4-1/2" casing was set at 1171' and cemented with 180 sac cement. The float collar and guide shoe have not been drilled out nor has the casing been perforated in any manner. It is our proposal to leave all of the casing in the well, capped with a valve. The standard 4" marker will be set and the well abandoned.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
