i		NORTHWES	T NEW MEXICO PAC	KER LEAKAGE TES	T INSTRUCTIONS					
1. A packer leakage test shall be commenced on each multiply completed well within seven days after except that the previously produced zone shall remain shut-in while the zone which										
actual completion of the well, and annually thereafter as prescribed by the order authorizing the was previously shut-in is produced. multiple completion. Such tests shall also be connected on all multiple completions within seven days 7. Pressures for gas-zone tests must be measured on each zone with a deadweight										
following recompletion and/or chemical or frac-ture treatment, and whenever remedial work has been done on a well during which the packer or the tubing have been disturbed. Tests shall also be taken at										
any time that communication is suspected or when requested by the Division. thereof, and at hourly intervals thereafter, including one pressure measurement										
the Division i	2. At least 72 hours prior to the commencement of any packer leakage test, the operator shall notify immediately prior to the flow period, at least one time during each flow period (at approximately the midway point) and immediately prior to the conclusion of each									
3. The packe	notified. 3. The packer leakage test shall commence when both zones of the dual completion are shut-in for which have previously shown questionable test data.									
pressure stabilization. both zones shall remain shut-in until the well-head pressure in each has 24-hour oil zone tests: all pressures, throughout the entire test, shall be										
4. For flow 1	stabilized, provided however, that they need not remain shut-in more than seven days. 4. For flow Test No. 1, one zone of the dual completion shall be produced at the normal rate of which must be checked at least twice, once at the beginning and once at the end of									
production while the other zone remains shuf-in. Such uses shall be continued for seven days if the case of a gas well and for 24 hours in the case of an oil well. Note: if, on an initial packer leakage test, a										
gas well is being flowed to the atmosphere due to the lack of a pipeline connection the flow period shall deadweight pressures as required above being taken on the gaz zone.										
5. Following	5. Following completion of flow Test No. 1, the well shall again be shut-in, in accordance with a first completion of the test. Tests shall be filed with the Aztec District Office of the									
Paragraph 3 above. 6. Flow Test No. 2 shall be conducted even though no leak was indicated during flow Test No. 1. New Mexico Oil Conservation Division of Northwest New Mexico Packer Leakage Test form Revised 10/01/78 with all deadweight pressures indicated thereon as well										
Procedure for	Flow Test No. 2 is to be t	he same as for Flow Test No).]			and gravity and GOR (oil zones only).
