

NEW MEXICO OIL CONSERVATION COMMISSION
PACKER SETTING REPORT

I, Don R. Read, being of lawful age and having full
(Name of party making report)

knowledge of the facts hereinbelow set out do state:

That I am employed by El Paso Natural Gas Company in the capacity of
Petroleum Engineer, that on September 4, 1977

I personally supervised the setting of a Baker Model "D" Packer
(Make & type of packer)
in El Paso Natural Gas Company, Mudge
(Operator of well) *(Location name)*

Well no. 4A located in the Blanco P.C. & Blanco MV field,
San Juan county, state of New Mexico, at a subsurface depth of
3225' feet, said depth measured by having been furnished to me by
Wireline Measurement;

That the purpose of setting this packer was to effect a seal in the annular space between two strings of pipe where the packer was set so as to prevent the commingling, in the bore of this well, of fluids produced from a stratum below the packer with fluids produced from a stratum above the packer; that this packer was properly set and that it did, when set, effectively and absolutely seal off the annular space between the two strings of pipe where it was set in such manner so that it prevented any movement of fluids across the packer.

Don R. Read
