NEW MEXICO OIL CONSERVATION COMMISSION
PACKER SETTING REPORT

7-26-81
G. Brink

knowledge of the facts hereinafter set out do state:

That I am employed by El Paso Natural Gas Co. in the capacity of
Petroleum Engineer, that on April 10th, 1981

I personally supervised the setting of a Baker Model G-22 Seal Assembly
Make & type of packer

in EPNG, Atlantic A,
Operator of well Lease name

Well no. 5A located in the Blanco MV & Blanco PC field,

San Juan county, state of New Mexico at a subsurface depth of

3230' feet, said depth measurement having been furnished me by

Pipe Record;

That the purpose of setting this packer was to effect a seal in the annular space between two strings of pipe where the packer was set so as to prevent the commingling, in the bore of this well, of fluids produced from a stratum below the packer with fluids produced from a stratum above the packer; that this packer was properly set and that it did, when set, effectively and absolutely seal off the annular space between the two strings of pipe where it was set in such manner as that it prevented any movement of fluids across the packer.
