An unsuccessful attempt was made to RIH w/coiled tubing unit and squeeze the casing leak. A slight hole was located between 1950' - 2000' in which we could barely pump into. We tried to locate the right sized coiled tubing without luck and then the decision was made to go ahead and P&A this well. We have turned this well over to Key Energy to turnkey this P&A'ing operation. They will be submitting their procedure this week to obtain the BLMs approval to plug this well. Because of rig availability this well won't be plugged until the spring of 2002.
