Sundry Notice Submittal

Well: Richardson #9E
Unit L, Sec. 15, T31N, R12W

It is intended to recomplete the Mesaverde formation in the existing Dakota wellbore. A rig will MIRU, ND wellhead, NU BOP, and pull production tubing. At this time the Dakota interval will be permanently abandoned. A CIBP will be set at +/- 7065' and a 100' (\approx 10 sks) Class B Neat cement plug will be spotted above the CIBP.

If adequately isolated by cement, the Mesaverde will be perforated and fracture stimulated in three stages in the following interval: 3333-5260'. If cement remediation operations are necessary, Burlington Resources will contact the appropriate regulatory agency for approval prior to work initiation.

After stimulation flow back and clean out, tubing will be landed at approximately 5000'. The well will then produce from the Mesaverde formation only.
