RE: Thirteen point Development
Plan for Surface use

Gentlemen:

The following thirteen point development plan for surface use is submitted in connection with the application to drill and test a well in Section 35 Township 32 North Range 17 West N.M.P.M. in San Jaun County New Mexico.

1. We have submitted as a part of the application to drill a plat showing the well location and another plat showing all roads and drainage in the area. No other roads are contemplated.
2. The existing road is a dirt road and any departure therefrom to the drill site will utilize trails and it will be unnecessary to use road graders or tractors for the construction thereof.
3. The location of the proposed well in relation to the other roads in the area is delineated on the second plat which is submitted with the application to drill.
4. Lateral Roads will not be necessary.
5. We plan to utilize the existing tank batteries for testing and if the well is commercial use the same battery for production. The existing batteries and flow lines are shown on map number 1.
6. This well will be drilled with air, Therefore a very small amount of water will be used. Some to kill dust, some to cement surface and cement production casing, this water will be hauled in trucks from town. No water lines will be used.
7. Trash will be picked up and put in trash pit and burned, then covered at least 2 ft. below ground level, pit will be covered and leveled. If well is dry the location will be reseeded. Cuttings will be circulated to the mud pits and buried later when pits are dry.
