The elevation of the derrick floor above sea level is _____ ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate muddling jobs, cementing points, and all other important proposed work)

6942' - Total Depth - Sand & Shale. It is our intention to plug well back from 6942' to a approximately 4450' with cement and test the Point Lookout zone for gas - We plan to place cement plugs from 6942' to 6825', 6785' to 6585' and from 4700' to 4450', with heavy drilling mud left between each. We plan to run 7" OD 17#, 20#, & 23# casing, set at 4260' and cemented with 300 sacks common cement. After plugging back to 4450', we will drill out to 4590' and test cement plug - Will then run casing & test for gas -

We are listing below geological formations encountered in this well -

| | | | | | |
|--------------------|-------|-------------------|-------|--------------|-------|
| Top Pictured Cliff | 2282' | Top Point Lookout | 4310' | Top Harrison | - |
| Top Cliff House | 3792 | Top Tocito | 5545' | | 6883' |
| Top Menefee | 3868' | Top Dakota | 6708' | | |

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
