	DETAILS OF WORK	DIST. 3
/a	onthe to chiestive cande: show sizes weights and leng	the of proposed came:
(State names of and expected do	epths to objective sands; show sizes, weights, and leng g jobs, cementing points, and all other important propo	ths of proposed cases;
in to drill to the fleti	g jobs, cementing points, and all other important propo wood Cliffs. The top is expected at all	osed work)
an to drill to the Plots producing string will	g jobs, cementing points, and all other important propoured Cliffe. The top is expected at all be 7° C.D. casing to be comented with	osed work 1075 . 150 sex cenent.
an to drill to the Floto producing string will I will be drilled with	g jobs, cementing points, and all other important propoured Cliffs. The top is expected at all be 7° C.D. casing to be comented with retary tools to top of Pictured Cliffs	out 1075'. 150 sax cenent. I send and
an to drill to the Floti producing string will Il will be drilled with illed in with cable tool	g jobs, comenting points, and all other important propoured Cliffs. The top is expected at all be 7° C.D. casing to be comented with retary tools to top of Pictured Cliffs is. Well will be shot with 200 qts of	out 1075'. 150 sex cenent.
in to drill to the Plots producing string will I will be drilled with lled in with cable tool	g jobs, cementing points, and all other important propoured Cliffs. The top is expected at all be 7° C.D. casing to be comented with retary tools to top of Pictured Cliffs	out 1075'. 150 sex cement.
an to drill to the Plots producing string will will be drilled with illed in with cable too ened out and about 190	g jobs, cementing points, and all other important propoured Cliffs. The top is expected at all be 7° O.D. casing to be comented with retary tools to top of Pictured Cliffs is. Well will be shot with 200 qts of O' of 1° syphon line run.	nitro glycerine,
an to drill to the Flotion producing string will it will be drilled with illed in with cable too mened out and about 190	g jobs, cementing points, and all other important propoured Cliffs. The top is expected at all be 7° O.D. casing to be cemented with retary tools to top of Pictured Cliffs is. Well will be shot with 200 qts of O' of 1° syphon line run.	nout 1075.  150 sex cement.  send and nitro glycerine.
in to drill to the Flotion producing string will it will be drilled with lied in with cable too ened out and about 190	g jobs, cementing points, and all other important propoured Cliffs. The top is expected at all be 7° O.D. casing to be comented with retary tools to top of Pictured Cliffs is. Well will be shot with 200 qts of O' of 1° syphon line run.	noted work) 150 sax cement. Is sand and nitro glycerine. Is sand to surface and with 150 sax.
in to drill to the Plate producing string will it will be drilled with illed in with cable too ened out and about 190	g jobs, cementing points, and all other important propoured Cliffs. The top is expected at all the 7" O.D. casing to be cemented with retary tools to top of Fletured Cliffs is. Well will be shot with 200 qts of O' of 1" syphon line run.  mately as follows: 100° of 9-5/8" communications and the communications are the communications and the communications are communications and communications are communications and communications are communications and communications are communications are communications and communications are communications.	150 sax cenent.  150 sax cenent.  1 sand and  nitro glycerine.  mented to surface  id with 150 sex.
in to drill to the Flotion producing string will it will be drilled with lled in with eable too sened out and about 190	g jobs, cementing points, and all other important propoured Cliffs. The top is expected at all the 7" O.D. casing to be cemented with retary tools to top of Fletured Cliffs is. Well will be shot with 200 qts of O' of 1" syphon line run.  mately as follows: 100° of 9-5/8" communications and the communications are the communications and the communications are communications and communications are communications and communications are communications and communications are communications are communications and communications are communications.	150 sex cement.  150 sex cement.  1 send and  nitro glycerine.  mented to surface  id with 150 sex.
in to drill to the Flotion producing string will it will be drilled with lled in with eable too sened out and about 190	g jobs, cementing points, and all other important propoured Cliffs. The top is expected at all the 7" O.D. casing to be cemented with retary tools to top of Fletured Cliffs is. Well will be shot with 200 qts of O' of 1" syphon line run.  mately as follows: 100° of 9-5/8" communications and the communications are the communications and the communications are communications and communications are communications and communications are communications and communications are communications are communications and communications are communications.	150 sex cement.  150 sex cement.  1 send and  nitro glycerine.  mented to surface  id with 150 sex.
in to drill to the riction producing string will a will be drilled with lied in with cable too sened out and about 190 sing progress is approximately	g jobs, cementing points, and all other important propoured Cliffs. The top is expected at all be 7° C.D. casing to be cemented with retary tools to top of Pictured Cliffs is. Well will be shot with 200 qts of O' of 1° syphon line run.  mately as follows: 100° of 9-5/8° compated to 1875° of 7° coments	150 sax cenent.  I sand and nitro glycerine.  mented to surface and with 150 sex.
in to drill to the flots producing string will a will be drilled with lied in with cable too aned out and about 190 ing program is approximately approximate	g jobs, cementing points, and all other important propoured Cliffs. The top is expected at all be 7° C.D. casing to be commuted with retary tools to top of Pictured Cliffs ls. Well will be shot with 200 qts of O' of 1° syphon line run.  mately as follows: 100° of 9-5/8° commuted to 1875° of 7° commuted to 1875° of 7° commuted to 1875° of 7° commuted to 1875° of 8°	150 sax cenent.  I sand and nitro glycerine.  mented to surface and with 150 sex.
in to drill to the riction producing string will a will be drilled with lied in with cable too sened out and about 190 sing progress is approximately	g jobs, cementing points, and all other important propoured Cliffs. The top is expected at all be 7° C.D. casing to be commuted with retary tools to top of Pictured Cliffs ls. Well will be shot with 200 qts of O' of 1° syphon line run.  mately as follows: 100° of 9-5/8° commuted to 1875° of 7° commuted to 1875° of 7° commuted to 1875° of 7° commuted to 1875° of 8°	150 sax cenent.  I sand and nitro glycerine.  mented to surface and with 150 sex.
in to drill to the flots producing string will will be drilled with lled in with cable tool and out and about 190 ing program is approximately I understand that this plan operations may be comme	g jobs, cementing points, and all other important propoured Cliffs. The top is expected at all be 7° C.D. casing to be commuted with retary tools to top of Pictured Cliffs ls. Well will be shot with 200 qts of O' of 1° syphon line run.  mately as follows: 100° of 9-5/8° commuted to 1875° of 7° commuted to 1875° of 7° commuted to 1875° of 7° commuted to 1875° of 8°	150 sax cenent.  I sand and nitro glycerine.  mented to surface and with 150 sax.
I understand that this plan operations may be comme  Company  I to the Plots  Indicate muddling in the Plots  I will to the Plots  I will be drilled with lied in with cable tool  and out and about 190  I understand that this plan operations may be comme	g jobs, cementing points, and all other important propoured Cliffs. The top is expected at all be 7° C.D. cessing to be semented with retary tools to top of Pictured Cliffs is. Well will be shot with 200 qts of 0° of 1° syphon line run.  mately as follows: 100° of 9-5/8° centre 1875° of 7° cements in of work must receive approval in writing by the Geolenced.  RAL GAS COMPANY ET AL	150 sex cement.  I send and nitro glycerine,  mented to surface and with 150 sex.
I understand that this plan operations may be comme  Company  Address  indicate muddling in the flow flow flow flow flow flow flow flow	g jobs, cementing points, and all other important propoured Cliffs. The top is expected at all be 7° C.D. cessing to be cemented with retary tools to top of Pictured Cliffs ls. Well will be shot with 200 qts of O' of 1° syphon line run.  Mately as follows: 100° of 9-5/8° cessints of 7° cements ls75° of 7° cements and of work must receive approval in writing by the Geolenced.  RAL GAS COMPANY ET AL	150 sax cement.  I sand and nitro glycerine.  mented to surface and with 150 sax.  Azrac N.M.
