REVISED

10:51 am, Jun 23, 2015

1. Revised from C141 dated 22 June 15.

Describe Cause of Problem and Remedial Action Taken.*

Driver was loading from lack unit and was not close to the header valve and overfilled tank causing 17 barrels to spill from the vent valve. D&H Environmental was called out to assess the problem and remove any free liquids if present. One Call was dispatched to locate any utilities from site. Site map was performed to outline areas of contamination and sampling was performed to determine the depth of the spill.

Describe Area Affected and Cleanup Action Taken.*

See Attached Form

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.
