---

Mr. Garcia:

NMOCD considers the delineation for 1RP-4691 complete. However, the proposed remediation plan is not approved. Is there field data at 4 ft. bgs? Unless the excavated area at 2 ft. bgs is within permissible chloride levels of 600 mg/kg, the proposed excavated depth must be 4 ft. and possibly a liner if bottom confirmation samples exceeds permissible levels. Furthermore, E5 at 5 ft. bgs exceeds 600 mg/kg chloride levels, in which a liner for the area represented by E5-5 will be required at 4 ft. bgs. Please submit a modified remediation plan.

Thanks,  
Olivia

Olivia,

The following attachment contains the site characteristics for the 1RP-4691.

Thanks

Eric Garcia
