Attachments: approved_(Work Plan) Gettysburg State Com #002H (30-025-40874) 9-23-2017 (1RP-4823)_final.pdf

Mr. Hitchcock:

Notes:

- TX1005 is not an approved NMOCD method for TPH extended analyses.
- Temperature of the cooler is not optimal.

NMOCD will consider delineation complete for 1RP-4823 and approve of the proposed remediation plan with these stipulations:

1. Confirmation bottoms and sidewall samples are required for the area represented by T-1. One sample must be at the border of the area represented by T-2 & T-3.
2. Confirmation sidewall samples are required for the area represented by T-2 and T-3. One sidewall sample must be located at the border of the area represented by T-4, where no remediation is required.
3. Confirmation sample locations should be no greater than 50 ft. apart.
4. On an appropriately scaled map, a) outline the different excavated and lined areas; b) annotate depths of excavation; and c) mark confirmation sidewall and bottom sample locations with GPS coordinates.
5. Dated photo documentation of remedial activities.

Please confirm or inform for clarification.

Thanks,

Olivia Yu
Environmental Specialist
NMOCD, District I
Olivia.yu@state.nm.us
575-393-6161 x113

OCD approval does not relieve the operator of liability should their operations fail to adequately investigate and remediate contamination that may pose a threat to ground water, surface water, human health or the environment. In addition, OCD approval does not relieve the operator of responsibility for compliance with any other federal, state, local laws and/or regulations.
