INTRODUCTION

TRC Environmental Corporation (TRC), formerly NOVA Safety and Environmental (NOVA), on behalf of ETC Field Services, LLC (ETC), formerly known as Southern Union Gas Services (SUGS) and Regency Field Services, LLC (Regency), has prepared this Remediation Summary and Site Closure Request for the Release Site known as 4 Inch Lateral (2/18/13). The legal description of the Release Site is Unit Letter "A" (NE ¼ NE ¼), Section 17, Township 25 South, Range 37 East, in Lea County, New Mexico. The property affected by the release is owned by The Woolworth Trust. The Release Site GPS coordinates are 32º 08.142' North and 103º 10.729' West. Please reference Figure 1 for the Site Location Map and Figure 2 for the Site Details and Confirmation Soil Sample Location Map. The Release Notification and Corrective Action (Form C-141) is provided as Appendix D.

On February 18, 2013, SUGS discovered a crude oil, produced water, and natural gas release from a four (4)-inch steel pipeline. The released fluid flowed from the release point to the south approximately two hundred (200) feet and was reported to the New Mexico Oil Conservation Division (NMOCD) on February 18, 2013. During initial response activities, SUGS installed a temporary pipeline clamp on the pipeline to mitigate the release. Approximately twenty-five (25) barrels of fluid was released from the pipeline, with no recovery. Approximately sixty (60) cubic yards (cy) of heavily saturated soil was excavated from the release flowpath and placed on a plastic liner. On February 25, 2013, the heavily saturated stockpiled soil was transported to Sundance Services in Eunice, New Mexico. General photographs of the site are provided as Appendix B.

NMOCD SITE CLASSIFICATION

According to data obtained from the New Mexico Office of the State Engineer (NMOSE), one (1) water well is registered in Section 17, Township 25S, Range 37E. The water well, located in Unit Letter "M" of Section 17, was installed in 1920 and no information is available as to the depth to groundwater. A depth to groundwater reference map utilized by the NMOCD indicates groundwater should be encountered at approximately eighty (80) feet below ground surface (bgs). The depth to groundwater at the 4 Inch Lateral (2/18/13) Release Site results in ten (10) points being assigned to the site based on the NMOCD depth to groundwater criteria.

The water well database, maintained by the NMOSE, indicated there are no water wells less than 1,000 feet from the release, resulting in zero (0) points being assigned to this site as a result of this criteria.

There are no surface water bodies located within 1,000 feet of the site. Based on the NMOCD ranking system zero (0) points will be assigned to the site as a result of the criteria.

The NMOCD guidelines indicate the 4-Inch Lateral (2/18/13) Release Site has a ranking score of ten (10). Based on this score, the soil remediation levels for a site with a ranking score of ten (10) points are as follows:

- Benzene – 10 mg/Kg (ppm)
- BTEX – 50 mg/Kg (ppm)
- TPH – 1,000 mg/Kg (ppm)

The NMOCD chloride cleanup level concentrations are site specific and will be determined by the NMOCD Hobbs District Office.

SUMMARY OF SOIL REMEDIATION ACTIVITIES

On March 19, 2013, following initial response activities, delineation and excavation of the impacted soil began at the Release Site. Soil samples were periodically collected, field screened for concentrations of chloride and selected soil samples were submitted to the laboratory for analysis. Please reference Figure 2 for site details and soil sampling locations.

On March 19, 2013, a soil sample (RP Baseline) was collected beneath the release point. The soil sample was submitted to the laboratory and was analyzed for concentrations of benzene, toluene, ethylbenzene, and xylene (BTEX) using EPA Method SW 846-8021B, Total Petroleum Hydrocarbons (TPH) using EPA Method SW 846-8015M and chloride using EPA Method E 300.0. The analytical results indicated the benzene concentration was less than the laboratory Method Detection Limit (MDL) of 0.00107 mg/Kg, the BTEX concentration was less than the laboratory MDL of 0.00214 mg/Kg, the TPH concentration was 297 mg/Kg and the chloride concentration was 2,140 mg/Kg. Table 1 summarizes the Concentrations of Benzene, BTEX, TPH, and Chlorides in Soil. Analytical reports are provided as Appendix A.

In addition, a five (5) point composite stockpile soil sample (SP Baseline) was collected from a soil stockpile adjacent to the release point. The analytical results indicated the benzene and BTEX concentrations of the stockpile were less than the laboratory MDL and NMOCD regulatory guidelines. The TPH concentration of the stockpiled soil was 264.7 mg/Kg and the chloride concentration was 265 mg/Kg.

On March 21, 2013, a trench was advanced adjacent to the release point to investigate the vertical depth of impact at the release point. Soil samples (RP-1 @ 8', RP-2 @ 10', RP-3 @ 15') were collected at eight (8) feet below ground surface (bgs), ten (10) feet bgs and fifteen (15) feet bgs as the trench was advanced. The soil samples were submitted to the laboratory and the analytical results indicated soil sample RP-1 @ 8' exhibited a benzene, BTEX and TPH concentration less than the laboratory MDL and NMOCD regulatory guidelines. Chloride analysis indicated soil samples RP-1 @ 8', RP-2 @ 10' and RP-3 @ 15' exhibited concentrations of 663 mg/Kg, 775 mg/Kg and 4,840 mg/Kg, respectively. Please refer to Figure 2 for soil sample locations.

Based on the analytical results of the investigation trench, vertical delineation of the Release Site could not be achieved using an excavator. Horizontal delineation of Release Site continued to the north, south and west of the release point. Impacted soil from the surface to four (4) feet bgs was excavated and stockpiled on site. An investigation trench was utilized to delineate impacted soil at depths greater than four (4) feet bgs. Soil adjacent to and northeast of the release point was left in-situ to allow for mobilization of a drilling rig to advance a soil boring. Soil investigation activities and results are discussed below.

On March 22, 2013, two (2) soil samples (WW-1 @ 3' and WW-1 @ 14') were collected from the west sidewall of the excavation and delineation trench. The soil samples were submitted to the laboratory and analytical results indicated benzene, BTEX, and TPH concentrations were less the laboratory MDL and NMOCD regulatory guidelines. The analytical results indicated chloride

concentrations for soil sample WW-1 @ 3' and WW-1 @ 14' were 437 mg/Kg and 193 mg/Kg, respectively. Based on the analytical results, soil represented by soil sample WW-1 @ 3' was excavated and stockpiled on site as the excavation progressed an additional five (5) feet to the west. Please refer to Figure 2 for soil sample locations.

An additional soil sample (WW-1A @ 3') was collected from the west sidewall of the excavation. The soil sample was submitted to the laboratory and analytical results indicated the benzene, BTEX, and TPH concentrations were less than the laboratory MDL and NMOCD regulatory guidelines. The chloride concentration was of the soil sample was 1,320 mg/Kg. Based on the analytical results, soil represented by soil sample WW-1A @ 3' was excavated and stockpiled on site as the excavation progressed an additional five (5) feet to the west.

An additional soil sample (WW-1B @ 3') was collected from the west sidewall of the excavation. The soil sample was submitted to the laboratory and analytical results indicated the benzene, BTEX, and TPH concentrations were less the laboratory MDL and NMOCD regulatory guidelines. The analytical results indicated the chloride concentration was 856 mg/Kg. Based on the analytical results, soil represented by soil sample WW-1B @ 3' was excavated and stockpiled on site as the excavation progressed an additional five (5) feet to the west. Please refer to Figure 2 for soil sample locations. Please refer to Figure 2 for soil sample locations.

On March 25, 2013, an additional soil sample (WW-1C @ 3') was collected from the west sidewall of the excavation. The soil sample was submitted to the laboratory and analytical results indicated the benzene, BTEX, and TPH concentrations were less the laboratory MDL and NMOCD regulatory guidelines The analytical results indicated the chloride concentration was 679 mg/Kg. Based on the analytical results, soil represented by soil sample WW-1C @ 3' was excavated and stockpiled on site as the excavation progressed an additional fifteen (15) feet to the west.

An additional soil sample (WW-1D @ 3') was collected from the west sidewall of the excavation. The soil sample was submitted to the laboratory and analytical results indicated the benzene, BTEX, and TPH concentrations was less than the laboratory MDL and NMOCD regulatory guidelines. The analytical results indicated the chloride concentration was 73.6 mg/Kg. Based on the analytical results, no additional excavation was warranted on the west sidewall of the excavation. Please refer to Figure 2 for soil sample locations.

The excavation and delineation trench progressed to the south; periodic soil sampling and chloride field screening indicated chloride concentrations exceeded the NMOCD regulatory guidelines for the Release Site.

On April 2, 2013, two (2) soil samples (SW-1 @ 3' and SW-1 @ 15') were collected from the south sidewall of the excavation. The soil samples were submitted to the laboratory and analytical results indicated benzene, BTEX, and TPH concentrations were less than the laboratory MDL and NMOCD regulatory guidelines. The analytical results indicated chloride concentrations for SW-1 @ 3' and SW-1 @ 15' were 441 mg/Kg and 340 mg/Kg, respectively. Based on the analytical results, the delineation trench was extended approximately ten (10) feet to the south and resampled. Soil excavated from the delineation trench was added to the existing soil stockpile.

Soil samples SW-1A @ 3' and SW-1A @ 15' were collected from the south sidewall of the excavation and submitted to the laboratory for analysis. The analytical results indicated soil

samples SW-1A @ 3' and SW-1A @ 15' exhibited chloride concentrations of 154 mg/Kg and 393 mg/Kg, respectively. Based on the analytical results the delineation trench was extended approximately ten (10) feet to the south and resampled. Soil excavated from the trench was added to the existing soil stockpile.

Soil samples SW-1B @ 3' and SW-1B @ 15' were collected from the south sidewall and submitted to the laboratory for analysis. The analytical results indicated soil samples SW-1B @ 3' and SW-1B @ 15' exhibited chloride concentrations of 236 mg/Kg and 119 mg/Kg, respectively. Based on the analytical results of soil samples submitted to the laboratory the southernmost horizontal extent of impact was delineated. Please refer to Figure 2 for soil sample locations.

On April 3, 2013, delineation of the northernmost extent of impact commenced, soil samples (NWW-1 @ 3' and NWW-1 @ 15') were collected from the northwest sidewall of the excavation. The soil samples were submitted to the laboratory and analytical results indicated benzene, BTEX and TPH concentrations were less the laboratory MDL. The analytical results indicated soil samples NWW-1 @ 3' and NWW-1 @ 15' exhibited chloride concentration of 120 mg/Kg and 760 mg/Kg, respectively. Based on the analytical results the delineation trench was extended approximately five (5) feet to the northwest and resampled. Soil excavated from the trench was added to the existing soil stockpile.

Soil sample NWW-1A @ 15' was collected from the northwest sidewall of the delineation trench and submitted to the laboratory for analysis. The analytical results indicated the soil sample (NNW-1A @ 15') exhibited a chloride concentration of 97.0 mg/Kg. Based on the analytical results, the delineation trench was terminated. Based on chloride field screening, it was determined chloride concentrations exceeding NMOCD regulatory guidelines were present at depths above four (4) feet bgs. Delineation and excavation continued approximately twenty (20) feet to the northwest. A soil sample (NWW-1B @ 3') was collected from the northwest sidewall of the excavation and submitted to the laboratory for chloride analysis. The analytical results the soil sample exhibited a chloride concentration of 1,220 mg/Kg. Based on the analytical results, delineation and excavation continued approximately fifteen (15) feet to the northwest. A soil sample (NWW-1C @ 3') was collected from the sidewall of the excavation and submitted to the laboratory. The analytical results indicated the soil sample exhibited a chloride concentration of 13.1 mg/Kg. Based on the analytical results of soil samples submitted to the laboratory the northwestern most horizontal extent of impact appears to be delineated. Please refer to Figure 2 for soil sample locations.

As stated above, the area adjacent to and east of the release point was not disturbed to allow a soil boring to be advanced at a future date. A delineation trench was advanced to the east of the undisturbed area to delineate the easternmost extent of horizontal impact.

On April 3, 2013, two (2) soil samples (EW-1 @ 3' and EW-1 @ 15') were collected from the east sidewall of the delineation trench. The analytical results indicated soil samples EW-1 @ 3' and EW-1 @ 15' exhibited benzene, BTEX, and TPH concentration less than the laboratory MDL and NMOCD regulatory guidelines. Chloride analysis indicated soil samples EW-1 @ 3' and EW-1 @ 15' exhibited chloride concentrations of 3,910 mg/Kg and 1,150 mg/Kg, respectively. Based on the analytical results, the delineation trench was advanced an additional five (5) feet to the east and excavated soil was added to the existing stockpile. A soil sample (EW-1A @ 15') was collected from the east sidewall of the delineation trench and submitted to the laboratory for

chloride analysis. The analytical results indicated the soil sample exhibited a chloride concentration of 1,070 mg/Kg. Based on the analytical results, the delineation trench was advanced an additional five (5) feet to the east. Following advancement of the delineation trench, two (2) soil samples (EW-1B3' and EW-1B @ 15') were collected from the east sidewall of the delineation trench and submitted to the laboratory for chloride analysis. The analytical results indicated soil samples EW-1B @ 3' and EW-1B @ 15' exhibited chloride concentrations of 221 mg/Kg and 165 mg/Kg, respectively. Based on the analytical results of soil samples submitted to the laboratory the easternmost extent of horizontal impact appears to be delineated. Please refer to Figure 2 for soil sample locations.

Following the delineation of the easternmost extent of impact adjacent to the release point, equipment was moved to the south end of the investigation trench to delineate the easternmost extent of impact at the south end of the Release Site. The delineation trench was advanced approximately ten (10) feet to the east of soil sample SW-1B @ 3'.

On April 5, 2013, two (2) soil samples (EW-2 @ 3' and EW-2 @ 15') were collected and submitted to the laboratory. The analytical results indicated benzene and BTEX concentrations were less than the laboratory MDL and NMOCD regulatory guidelines. TPH analysis indicated soil sample EW-2 @ 3' exhibited a TPH concentration of 34.5 mg/Kg and soil sample EW-2 @ 15' exhibited a TPH concentration less than the laboratory MDL and NMOCD regulatory guidelines. Chloride analysis indicated soil samples EW-2 @ 3' and EW-2 @ 15' exhibited chloride concentrations of 2,800 mg/Kg and 4,100 mg/Kg, respectively. Based on the analytical results the delineation trench was advanced approximately thirty (30) feet to the east.

On April 9, 2013, two (2) soil samples (EW-2A @ 3' and EW-2A @ 15') were collected and submitted to the laboratory. Chloride analysis indicated soil samples EW-2A @ 3' and EW-2A @ 15' exhibited chloride concentrations of 163 mg/Kg and less than the laboratory MDL, respectively. Based on the analytical results of soil samples submitted to the laboratory the easternmost extent of horizontal impact at the south end of the Release Site appears to be delineated. Please refer to Figure 2 for soil sample locations.

Approximately 1,600 cubic yards (cy) of impacted soil was excavated and stockpiled on-site, pending final disposition. The final dimensions of the excavation were approximately two hundred fifty (250) feet in length, ranged from approximately twenty five (25) to one hundred (100) feet in width, and varied in depth from three (3) feet to fifteen (15) feet bgs.

Following excavation and delineation activities, the delineation trenches were partially backfilled as a safety precaution.

On December 4, 2013, representatives of NOVA (TRC) and the NMOCD, met in the NMOCD Hobbs District Office and discussed a closure strategy for the Release Site. The NMOCD representative requested three (3) soil borings be advanced at the Release Site to adequately delineate the vertical extent of chloride impact.

On an unknown date, the existing excavation was inadvertently backfilled with soil by another contractor. The analytical status of the backfill soil is unknown, but likely included the approximately 1,600 cy of impacted soil stockpiled on-site, awaiting final disposition.

On February 19, 2014, three (3) soil borings (SB-1 through SB-3) were advanced at the Release Site. Please reference Figure 2 for the locations of the soil borings. The soil borings were advanced until chloride field testing and visual and olfactory evidence indicated benzene, BTEX, TPH, and chloride concentrations were less than NMOCD regulatory guidelines for the Release Site. Soil samples were collected at five (5) foot intervals and field screened using a Photo-Ionization Detector (PID) and a chloride field test kit. Selected soil samples were submitted to the laboratory for determination of concentrations of benzene, toluene, ethyl-benzene, and xylene (BTEX), total petroleum hydrocarbon (TPH), and chlorides using EPA SW-846 8021B, SW-846 8015M, and E 300.1, respectively.

Soil boring SB-1 was advanced immediately east of the release point to a depth of approximately thirty-five (35) feet bgs. Soil samples collected at ten (10) feet bgs, fifteen (15) feet bgs, twenty (20) feet bgs, twenty-five (25) feet bgs, thirty (30) feet bgs, and thirty-five (35) feet bgs were submitted to the laboratory for analysis. The analytical results indicated benzene, BTEX, and TPH concentrations were less than the laboratory MDL and NMOCD regulatory guidelines. Chloride concentrations ranged from 68.8 mg/Kg for soil sample SB-1 @ 35' to 1,900 mg/Kg for soil sample SB-1 @ 15'. Based on the analytical results, vertical delineation of chloride impact in soil boring SB-1 was achieved at approximately thirty (30) feet bgs with a chloride concentration of 127 mg/Kg. Soil boring logs are provided as Appendix C.

Soil boring SB-2 was advanced in the central area of the Release Site, to a depth of approximately forty (40) feet bgs. Soil samples were collected at ten (10) feet bgs, fifteen (15) feet bgs, twenty (20) feet bgs, twenty-five (25) feet bgs, thirty (30) feet bgs, thirty-five (35) feet bgs, and forty (40) feet bgs and submitted to the laboratory for analysis. The analytical results indicated benzene, BTEX, and TPH concentrations were less than the laboratory MDL. Chloride concentrations ranged from 85.6 mg/Kg for soil sample SB-2 @ 40' to 4,740 mg/Kg for soil sample SB-2 @ 10'. Based on the analytical results, vertical delineation of chloride impact in soil boring SB-2 was achieved at approximately forty (40) feet bgs with a chloride concentration of 85.6 mg/Kg.

Soil boring SB-3 was advanced in the southern area of the Release Site, to a depth of approximately thirty-five (35) feet bgs. Soil samples collected at five (5) feet bgs, ten (10) feet bgs, twenty (20) feet bgs, thirty (30) feet bgs, and thirty-five (35) feet bgs were submitted to the laboratory for analysis. The analytical results indicated benzene, BTEX, and TPH concentrations were less than the laboratory MDL and NMOCD regulatory guideline. Chloride concentrations ranged from 14.6 mg/Kg for soil sample SB-3 @ 30' to 204 mg/Kg for soil sample SB-3 @ 20'. Based on the analytical results, vertical delineation of chloride impact in soil boring SB-3 was achieved at approximately five (5) feet bgs with a chloride concentration of 25.0 mg/Kg. Please refer to Figure 2 for soil sample locations.

On March 18, 2014, representatives of NOVA (TRC) and the NMOCD, met in the NMOCD Hobbs District Office and discussed a closure strategy for the Release Site. The NMOCD representative reviewed the analytical results of the soil samples collected during the soil boring advancement and verbally approved Regency's request to utilize at Risk-Based closure strategy at the 4-Inch Lateral (2/18/13) Release Site. The NMOCD representative approved the excavation of the Release Site to approximately twelve (12) feet bgs. In addition, the NMOCD approved the installation of a twenty (20) millimeter (mil) polyethylene liner at approximately twelve (12) feet bgs.

On November 18, 2015, representatives of ETC (formerly SUGS and Regency) and TRC (formerly NOVA) met with a NMOCD representative and submitted the "Remediation Summary and Proposed Risk-Based Closure Strategy" (Workplan) for NMOCD consideration. The Workplan summarized remedial activities to date and detailed a closure strategy designed to progress the Release Site toward an NMOCD approved closure status. On November 23, 2015, ETC received written (email) NMOCD approval to proceed with the activities outlined in the Workplan.

On December 3, 2015, TRC mobilized heavy equipment to the Release Site and commenced excavation activities from the release point to the east and north. Chloride field screening was utilized to guide the excavation activities. Excavated soil was stockpiled to the south and north of the excavation, pending final disposition of the soil.

As excavation activities progressed to the north of the release point, chloride field screening results indicated chloride concentrations were not decreasing in concentration, as anticipated and the aerial extent of chloride impact had exceeded the scope of the approved NMOCD Workplan. Areas to the north of the release point were geographically upslope of the Release Site and chloride impact from the 4-Inch Lateral (2/18/13) Release Site was unlikely. The elevation above median sea level (MSL) of the 4-Inch Lateral (2/18/13) Release Site ranges from approximately 3,130 feet above MSL on the south side of the Release Site to approximately 3,135 feet above MSL on the north side of the Release Site.

On December 22 and 23, 2015, a backhoe was utilized to collect six (6) soil samples (Sample 1 @ 4', Sample 2 @ 12', Sample 3 @ 4', Sample 4 @ 6", Sample 5 @ 6", and Sample 6 @ 6"), to the north of the existing excavation. Soil samples were analyzed for concentrations of chlorides using EPA Method 300.0. Soil sample 1 @ 4' and Sample 2 @ 12' were located in the same trench approximately one-hundred (100) feet north of the north sidewall of the existing excavation. Soil samples Sample 1 @ 4' and Sample 2 @ 12' were collected at elevations of approximately 3,134 and 3,126 feet above MSL, respectively. The analytical results indicated the chloride concentration of the sample collected at approximately four (4) feet bgs was 3,320 mg/Kg and the chloride concentration of the soil sample collected at approximately twelve (12) feet bgs was 52.4 mg/Kg. Please reference Figure 3 (Site Vicinity and Soil Sample Location Map) for soil sample locations.

Soil sample Sample 3 @ 4' was collected approximately two-hundred (200) feet north of the north sidewall of the existing excavation at a depth of approximately four (4) feet bgs. The soil sample was collected at an elevation of approximately 3,138 feet above MSL. The analytical results indicated the soil sample exhibited a chloride concentration of 4,010 mg/Kg.

Soil sample Sample 4 @ 6" was collected approximately eight hundred-seventy-five (875) feet north of the north sidewall of the existing excavation, at a depth of approximately six (6) inches bgs. The soil sample was collected adjacent to an exposed section of poly liner likely utilized in a risk-based closure strategy. The soil sample was collected at an elevation of approximately 3,153.5 feet above MSL. The analytical results indicated the soil sample exhibited a chloride concentration of 1,230 mg/Kg.

Soil sample Sample 5 @ 6" was collected approximately seven hundred-ten (710) feet north of the north sidewall of the existing excavation at a depth of approximately six (6) inches bgs. The soil sample was collected at an elevation of approximately 3,149.5 feet above MSL. The analytical results indicated the soil sample exhibited a chloride concentration of 2,780 mg/Kg.

Soil sample Sample 6 @ 6” was collected approximately four hundred seventy (470) feet north of the north sidewall of the existing excavation at a depth of approximately six (6) inches bgs. The soil sample was collected at an elevation of approximately 3,146.5 feet above MSL. The analytical results indicated the soil sample exhibited a chloride concentration of 2,300 mg/Kg.

On December 23, 2015, based on the above findings, ETC ceased further excavation activities at the Release Site and TRC reviewed NMOCD historical documents for potential off-site contributors associated with the likely risk-based closure strategy to the north and upslope of the 4-Inch Lateral (2/18/13) Release Site.

Utilizing the NMOCD imaging system, a potential off-site contributor was identified directly north and geographically upslope of the Release Site in Unit Letter “P”, Section 8, Township 25 South, Range 37 East. Documents contained on the NMOCD imaging system indicated five (5) soil samples (TP1 @ 3’, TP4 @ 3’, TP6 @ 1’, TP7 @ 1’, and TP8 @ 1’) were collected on behalf of the potential off-site contributor on January 18, 2007. The five (5) soil samples were submitted to the laboratory for analysis of concentrations of TPH and chloride using Method 8015M and EPA 300.0, respectively. The analytical results indicated all five (5) soil samples exhibited TPH concentrations less than the laboratory MDL of 10 mg/Kg. Chloride concentration ranged from 3,130 mg/Kg for soil sample TP8 @ 1’ to 7,790 mg/Kg for soil sample TP7 @ 1’. The laboratory analytical results referenced above are available on the NMOCD imaging system and are not included in this report. Please refer to Figure 3 for the approximate locations of the off-site contributor soil samples and the approximate location of soil samples collected on behalf of ETC. Note, soil sample TP4 @ 3’ cannot be accurately located with available data.

On January 13, 2016, representatives of ETC and TRC met with NMOCD representatives in the NMOCD Hobbs District Office and requested the NMOCD research and investigate the potential off-site contributions to the chloride impact at the 4-Inch Lateral (2/18/13) Release Site.

On March 7, 2016, the NMOCD granted ETC permission to backfill the existing excavation with the excavated soil without condition. On March 15, 2016, backfilling of the Release Site was completed.

SITE CLOSURE REQUEST

Based on the NMOCD permission to backfill the excavation without condition, ETC requests the NMOCD grant ETC Site Closure Status to the 4-Inch Lateral (2/18/13) incident of February 18, 2013.

LIMITATIONS

TRC has prepared this Remediation Summary and Site Closure Request to the best of its ability. No other warranty, expressed or implied, is made or intended.

TRC has examined and relied upon documents referenced in the report and has relied on oral statements made by certain individuals. TRC has not conducted an independent examination of the facts contained in referenced materials and statements. We have presumed the genuineness of the documents and that the information provided in documents or statements is true and accurate.

TRC has prepared this report, in a professional manner, using the degree of skill and care exercised by similar environmental consultants. TRC also notes that the facts and conditions referenced in this report may change over time and the conclusions and recommendations set forth herein are applicable only to the facts and conditions as described at the time of this report.

This report has been prepared for the benefit of ETC Field Services, LLC. The information contained in this report, including all exhibits and attachments, may not be used by any other party without the express consent of TRC and/or ETC Field Services, LLC.

Becky Haskell:

We are reporting to you the results of the analyses performed on the samples received under the project name referenced above and identified with the XENCO Report Number(s) 459605. All results being reported under this Report Number apply to the samples analyzed and properly identified with a Laboratory ID number. Subcontracted analyses are identified in this report with either the NELAC certification number of the subcontract lab in the analyst ID field, or the complete subcontracted report attached to this report.

Unless otherwise noted in a Case Narrative, all data reported in this Analytical Report are in compliance with NELAC standards. The uncertainty of measurement associated with the results of analysis reported is available upon request. Should insufficient sample be provided to the laboratory to meet the method and NELAC Matrix Duplicate and Matrix Spike requirements, then the data will be analyzed, evaluated and reported using all other available quality control measures.

The validity and integrity of this report will remain intact as long as it is accompanied by this letter and reproduced in full, unless written approval is granted by XENCO Laboratories. This report will be filed for at least 5 years in our archives after which time it will be destroyed without further notice, unless otherwise arranged with you. The samples received, and described as recorded in Report No. 459605 will be filed for 60 days, and after that time they will be properly disposed without further notice, unless otherwise arranged with you. We reserve the right to return to you any unused samples, extracts or solutions related to them if we consider so necessary (e.g., samples identified as hazardous waste, sample sizes exceeding analytical standard practices, controlled substances under regulated protocols, etc).

We thank you for selecting XENCO Laboratories to serve your analytical needs. If you have any questions concerning this report, please feel free to contact us at any time.

Respectfully,

Nicholas Straccione
Project Manager

Flagging Criteria

X In our quality control review of the data a QC deficiency was observed and flagged as noted. MS/MSD recoveries were found to be outside of the laboratory control limits due to possible matrix /chemical interference, or a concentration of target analyte high enough to affect the recovery of the spike concentration. This condition could also affect the relative percent difference in the MS/MSD.

B A target analyte or common laboratory contaminant was identified in the method blank. Its presence indicates possible field or laboratory contamination.

D The sample(s) were diluted due to targets detected over the highest point of the calibration curve, or due to matrix interference. Dilution factors are included in the final results. The result is from a diluted sample.

E The data exceeds the upper calibration limit; therefore, the concentration is reported as estimated.

F RPD exceeded lab control limits.

J The target analyte was positively identified below the quantiation limit and above the detection limit.

U Analyte was not detected.

L The LCS data for this analytical batch was reported below the laboratory control limits for this analyte. The department supervisor and QA Director reviewed data. The samples were either reanalyzed or flagged as estimated concentrations.

H The LCS data for this analytical batch was reported above the laboratory control limits. Supporting QC Data were reviewed by the Department Supervisor and QA Director. Data were determined to be valid for reporting.

K Sample analyzed outside of recommended hold time.

JN A combination of the "N" and the "J" qualifier. The analysis indicates that the analyte is "tentatively identified" and the associated numerical value may not be consistent with the amount actually present in the environmental sample.

* Surrogate recovered outside laboratory control limit.

BRL Below Reporting Limit.

Sample Receipt Checklist	Comments
#1 *Temperature of cooler(s)?	1
#2 *Shipping container in good condition?	**Yes**
#3 *Samples received on ice?	**Yes**
#4 *Custody Seals intact on shipping container/ cooler?	**Yes**
#5 Custody Seals intact on sample bottles?	**Yes**
#6 *Custody Seals Signed and dated?	**Yes**
#7 *Chain of Custody present?	**Yes**
#8 Sample instructions complete on Chain of Custody?	**Yes**
#9 Any missing/extra samples?	**No**
#10 Chain of Custody signed when relinquished/ received?	**Yes**
#11 Chain of Custody agrees with sample label(s)?	**Yes**
#12 Container label(s) legible and intact?	**Yes**
#13 Sample matrix/ properties agree with Chain of Custody?	**Yes**
#14 Samples in proper container/ bottle?	**Yes**
#15 Samples properly preserved?	**Yes**
#16 Sample container(s) intact?	**Yes**
#17 Sufficient sample amount for indicated test(s)?	**Yes**
#18 All samples received within hold time?	**Yes**
#19 Subcontract of sample(s)?	**Yes**
#20 VOC samples have zero headspace (less than 1/4 inch bubble)?	**Yes**
#21 <2 for all samples preserved with HNO3,HCL, H2SO4?	**Yes**
#22 >10 for all samples preserved with NaAsO2+NaOH, ZnAc+NaOH?	**Yes**

*** Must be completed for after-hours delivery of samples prior to placing in the refrigerator**

Becky Haskell:

We are reporting to you the results of the analyses performed on the samples received under the project name referenced above and identified with the XENCO Report Number(s) 459844. All results being reported under this Report Number apply to the samples analyzed and properly identified with a Laboratory ID number. Subcontracted analyses are identified in this report with either the NELAC certification number of the subcontract lab in the analyst ID field, or the complete subcontracted report attached to this report.

Unless otherwise noted in a Case Narrative, all data reported in this Analytical Report are in compliance with NELAC standards. The uncertainty of measurement associated with the results of analysis reported is available upon request. Should insufficient sample be provided to the laboratory to meet the method and NELAC Matrix Duplicate and Matrix Spike requirements, then the data will be analyzed, evaluated and reported using all other available quality control measures.

The validity and integrity of this report will remain intact as long as it is accompanied by this letter and reproduced in full, unless written approval is granted by XENCO Laboratories. This report will be filed for at least 5 years in our archives after which time it will be destroyed without further notice, unless otherwise arranged with you. The samples received, and described as recorded in Report No. 459844 will be filed for 60 days, and after that time they will be properly disposed without further notice, unless otherwise arranged with you. We reserve the right to return to you any unused samples, extracts or solutions related to them if we consider so necessary (e.g., samples identified as hazardous waste, sample sizes exceeding analytical standard practices, controlled substances under regulated protocols, etc).

We thank you for selecting XENCO Laboratories to serve your analytical needs. If you have any questions concerning this report, please feel free to contact us at any time.

Respectfully,

Nicholas Straccione
Project Manager

Flagging Criteria

X In our quality control review of the data a QC deficiency was observed and flagged as noted. MS/MSD recoveries were found to be outside of the laboratory control limits due to possible matrix /chemical interference, or a concentration of target analyte high enough to affect the recovery of the spike concentration. This condition could also affect the relative percent difference in the MS/MSD.

B A target analyte or common laboratory contaminant was identified in the method blank. Its presence indicates possible field or laboratory contamination.

D The sample(s) were diluted due to targets detected over the highest point of the calibration curve, or due to matrix interference. Dilution factors are included in the final results. The result is from a diluted sample.

E The data exceeds the upper calibration limit; therefore, the concentration is reported as estimated.

F RPD exceeded lab control limits.

J The target analyte was positively identified below the quantiation limit and above the detection limit.

U Analyte was not detected.

L The LCS data for this analytical batch was reported below the laboratory control limits for this analyte. The department supervisor and QA Director reviewed data. The samples were either reanalyzed or flagged as estimated concentrations.

H The LCS data for this analytical batch was reported above the laboratory control limits. Supporting QC Data were reviewed by the Department Supervisor and QA Director. Data were determined to be valid for reporting.

K Sample analyzed outside of recommended hold time.

JN A combination of the "N" and the "J" qualifier. The analysis indicates that the analyte is "tentatively identified" and the associated numerical value may not be consistent with the amount actually present in the environmental sample.

* Surrogate recovered outside laboratory control limit.

BRL Below Reporting Limit.

RL Reporting Limit

MDL Method Detection Limit **SDL** Sample Detection Limit **LOD** Limit of Detection

PQL Practical Quantitation Limit **MQL** Method Quantitation Limit **LOQ** Limit of Quantitation

DL Method Detection Limit

NC Non-Calculable

+ NELAC certification not offered for this compound.

Prelogin/Nonconformance Report- Sample Log-In

Client: Southern Union Gas Services- Monahan

Date/ Time Received: 03/22/2013 03:58:00 PM

Work Order #: 459844

Acceptable Temperature Range: 0 - 6 degC
Air and Metal samples Acceptable Range: Ambient

Temperature Measuring device used :

Sample Receipt Checklist	Comments
#1 *Temperature of cooler(s)?	4
#2 *Shipping container in good condition?	**Yes**
#3 *Samples received on ice?	**Yes**
#4 *Custody Seals intact on shipping container/ cooler?	**Yes**
#5 Custody Seals intact on sample bottles?	**Yes**
#6 *Custody Seals Signed and dated?	**Yes**
#7 *Chain of Custody present?	**Yes**
#8 Sample instructions complete on Chain of Custody?	**Yes**
#9 Any missing/extra samples?	**No**
#10 Chain of Custody signed when relinquished/ received?	**Yes**
#11 Chain of Custody agrees with sample label(s)?	**Yes**
#12 Container label(s) legible and intact?	**Yes**
#13 Sample matrix/ properties agree with Chain of Custody?	**Yes**
#14 Samples in proper container/ bottle?	**Yes**
#15 Samples properly preserved?	**Yes**
#16 Sample container(s) intact?	**Yes**
#17 Sufficient sample amount for indicated test(s)?	**Yes**
#18 All samples received within hold time?	**Yes**
#19 Subcontract of sample(s)?	**Yes**
#20 VOC samples have zero headspace (less than 1/4 inch bubble)?	**Yes**
#21 <2 for all samples preserved with HNO3,HCL, H2SO4?	**Yes**
#22 >10 for all samples preserved with NaAsO2+NaOH, ZnAc+NaOH?	**Yes**

*** Must be completed for after-hours delivery of samples prior to placing in the refrigerator**

Becky Haskell:

We are reporting to you the results of the analyses performed on the samples received under the project name referenced above and identified with the XENCO Report Number(s) 459989. All results being reported under this Report Number apply to the samples analyzed and properly identified with a Laboratory ID number. Subcontracted analyses are identified in this report with either the NELAC certification number of the subcontract lab in the analyst ID field, or the complete subcontracted report attached to this report.

Unless otherwise noted in a Case Narrative, all data reported in this Analytical Report are in compliance with NELAC standards. The uncertainty of measurement associated with the results of analysis reported is available upon request. Should insufficient sample be provided to the laboratory to meet the method and NELAC Matrix Duplicate and Matrix Spike requirements, then the data will be analyzed, evaluated and reported using all other available quality control measures.

The validity and integrity of this report will remain intact as long as it is accompanied by this letter and reproduced in full, unless written approval is granted by XENCO Laboratories. This report will be filed for at least 5 years in our archives after which time it will be destroyed without further notice, unless otherwise arranged with you. The samples received, and described as recorded in Report No. 459989 will be filed for 60 days, and after that time they will be properly disposed without further notice, unless otherwise arranged with you. We reserve the right to return to you any unused samples, extracts or solutions related to them if we consider so necessary (e.g., samples identified as hazardous waste, sample sizes exceeding analytical standard practices, controlled substances under regulated protocols, etc).

We thank you for selecting XENCO Laboratories to serve your analytical needs. If you have any questions concerning this report, please feel free to contact us at any time.

Respectfully,

Nicholas Straccione
Project Manager

Flagging Criteria

X In our quality control review of the data a QC deficiency was observed and flagged as noted. MS/MSD recoveries were found to be outside of the laboratory control limits due to possible matrix /chemical interference, or a concentration of target analyte high enough to affect the recovery of the spike concentration. This condition could also affect the relative percent difference in the MS/MSD.

B A target analyte or common laboratory contaminant was identified in the method blank. Its presence indicates possible field or laboratory contamination.

D The sample(s) were diluted due to targets detected over the highest point of the calibration curve, or due to matrix interference. Dilution factors are included in the final results. The result is from a diluted sample.

E The data exceeds the upper calibration limit; therefore, the concentration is reported as estimated.

F RPD exceeded lab control limits.

J The target analyte was positively identified below the quantiation limit and above the detection limit.

U Analyte was not detected.

L The LCS data for this analytical batch was reported below the laboratory control limits for this analyte. The department supervisor and QA Director reviewed data. The samples were either reanalyzed or flagged as estimated concentrations.

H The LCS data for this analytical batch was reported above the laboratory control limits. Supporting QC Data were reviewed by the Department Supervisor and QA Director. Data were determined to be valid for reporting.

K Sample analyzed outside of recommended hold time.

JN A combination of the "N" and the "J" qualifier. The analysis indicates that the analyte is "tentatively identified" and the associated numerical value may not be consistent with the amount actually present in the environmental sample.

* Surrogate recovered outside laboratory control limit.

BRL Below Reporting Limit.

RL Reporting Limit

MDL Method Detection Limit **SDL** Sample Detection Limit **LOD** Limit of Detection

PQL Practical Quantitation Limit **MQL** Method Quantitation Limit **LOQ** Limit of Quantitation

DL Method Detection Limit

NC Non-Calculable

+ NELAC certification not offered for this compound.

***** (Next to analyte name or method description) = Outside XENCO's scope of NELAC accreditation

Becky Haskell:

We are reporting to you the results of the analyses performed on the samples received under the project name referenced above and identified with the XENCO Report Number(s) 460525. All results being reported under this Report Number apply to the samples analyzed and properly identified with a Laboratory ID number. Subcontracted analyses are identified in this report with either the NELAC certification number of the subcontract lab in the analyst ID field, or the complete subcontracted report attached to this report.

Unless otherwise noted in a Case Narrative, all data reported in this Analytical Report are in compliance with NELAC standards. The uncertainty of measurement associated with the results of analysis reported is available upon request. Should insufficient sample be provided to the laboratory to meet the method and NELAC Matrix Duplicate and Matrix Spike requirements, then the data will be analyzed, evaluated and reported using all other available quality control measures.

The validity and integrity of this report will remain intact as long as it is accompanied by this letter and reproduced in full, unless written approval is granted by XENCO Laboratories. This report will be filed for at least 5 years in our archives after which time it will be destroyed without further notice, unless otherwise arranged with you. The samples received, and described as recorded in Report No. 460525 will be filed for 60 days, and after that time they will be properly disposed without further notice, unless otherwise arranged with you. We reserve the right to return to you any unused samples, extracts or solutions related to them if we consider so necessary (e.g., samples identified as hazardous waste, sample sizes exceeding analytical standard practices, controlled substances under regulated protocols, etc).

We thank you for selecting XENCO Laboratories to serve your analytical needs. If you have any questions concerning this report, please feel free to contact us at any time.

Respectfully,

Nicholas Straccione
Project Manager

Flagging Criteria

X In our quality control review of the data a QC deficiency was observed and flagged as noted. MS/MSD recoveries were found to be outside of the laboratory control limits due to possible matrix /chemical interference, or a concentration of target analyte high enough to affect the recovery of the spike concentration. This condition could also affect the relative percent difference in the MS/MSD.

B A target analyte or common laboratory contaminant was identified in the method blank. Its presence indicates possible field or laboratory contamination.

D The sample(s) were diluted due to targets detected over the highest point of the calibration curve, or due to matrix interference. Dilution factors are included in the final results. The result is from a diluted sample.

E The data exceeds the upper calibration limit; therefore, the concentration is reported as estimated.

F RPD exceeded lab control limits.

J The target analyte was positively identified below the quantiation limit and above the detection limit.

U Analyte was not detected.

L The LCS data for this analytical batch was reported below the laboratory control limits for this analyte. The department supervisor and QA Director reviewed data. The samples were either reanalyzed or flagged as estimated concentrations.

H The LCS data for this analytical batch was reported above the laboratory control limits. Supporting QC Data were reviewed by the Department Supervisor and QA Director. Data were determined to be valid for reporting.

K Sample analyzed outside of recommended hold time.

JN A combination of the "N" and the "J" qualifier. The analysis indicates that the analyte is "tentatively identified" and the associated numerical value may not be consistent with the amount actually present in the environmental sample.

* Surrogate recovered outside laboratory control limit.

BRL Below Reporting Limit.

RL Reporting Limit

MDL Method Detection Limit **SDL** Sample Detection Limit **LOD** Limit of Detection

PQL Practical Quantitation Limit **MQL** Method Quantitation Limit **LOQ** Limit of Quantitation

DL Method Detection Limit

NC Non-Calculable

+ NELAC certification not offered for this compound.

Sample Receipt Checklist	Comments
#1 *Temperature of cooler(s)?	1
#2 *Shipping container in good condition?	**Yes**
#3 *Samples received on ice?	**Yes**
#4 *Custody Seals intact on shipping container/ cooler?	**Yes**
#5 Custody Seals intact on sample bottles?	**Yes**
#6 *Custody Seals Signed and dated?	**Yes**
#7 *Chain of Custody present?	**Yes**
#8 Sample instructions complete on Chain of Custody?	**Yes**
#9 Any missing/extra samples?	**No**
#10 Chain of Custody signed when relinquished/ received?	**Yes**
#11 Chain of Custody agrees with sample label(s)?	**Yes**
#12 Container label(s) legible and intact?	**Yes**
#13 Sample matrix/ properties agree with Chain of Custody?	**Yes**
#14 Samples in proper container/ bottle?	**Yes**
#15 Samples properly preserved?	**Yes**
#16 Sample container(s) intact?	**Yes**
#17 Sufficient sample amount for indicated test(s)?	**Yes**
#18 All samples received within hold time?	**Yes**
#19 Subcontract of sample(s)?	**Yes**
#20 VOC samples have zero headspace (less than 1/4 inch bubble)?	**Yes**
#21 <2 for all samples preserved with HNO3,HCL, H2SO4?	**Yes**
#22 >10 for all samples preserved with NaAsO2+NaOH, ZnAc+NaOH?	**Yes**

*** Must be completed for after-hours delivery of samples prior to placing in the refrigerator**

Becky Haskell:

We are reporting to you the results of the analyses performed on the samples received under the project name referenced above and identified with the XENCO Report Number(s) 460712. All results being reported under this Report Number apply to the samples analyzed and properly identified with a Laboratory ID number. Subcontracted analyses are identified in this report with either the NELAC certification number of the subcontract lab in the analyst ID field, or the complete subcontracted report attached to this report.

Unless otherwise noted in a Case Narrative, all data reported in this Analytical Report are in compliance with NELAC standards. The uncertainty of measurement associated with the results of analysis reported is available upon request. Should insufficient sample be provided to the laboratory to meet the method and NELAC Matrix Duplicate and Matrix Spike requirements, then the data will be analyzed, evaluated and reported using all other available quality control measures.

The validity and integrity of this report will remain intact as long as it is accompanied by this letter and reproduced in full, unless written approval is granted by XENCO Laboratories. This report will be filed for at least 5 years in our archives after which time it will be destroyed without further notice, unless otherwise arranged with you. The samples received, and described as recorded in Report No. 460712 will be filed for 60 days, and after that time they will be properly disposed without further notice, unless otherwise arranged with you. We reserve the right to return to you any unused samples, extracts or solutions related to them if we consider so necessary (e.g., samples identified as hazardous waste, sample sizes exceeding analytical standard practices, controlled substances under regulated protocols, etc).

We thank you for selecting XENCO Laboratories to serve your analytical needs. If you have any questions concerning this report, please feel free to contact us at any time.

Respectfully,

Nicholas Straccione
Project Manager

Flagging Criteria

X In our quality control review of the data a QC deficiency was observed and flagged as noted. MS/MSD recoveries were found to be outside of the laboratory control limits due to possible matrix /chemical interference, or a concentration of target analyte high enough to affect the recovery of the spike concentration. This condition could also affect the relative percent difference in the MS/MSD.

B A target analyte or common laboratory contaminant was identified in the method blank. Its presence indicates possible field or laboratory contamination.

D The sample(s) were diluted due to targets detected over the highest point of the calibration curve, or due to matrix interference. Dilution factors are included in the final results. The result is from a diluted sample.

E The data exceeds the upper calibration limit; therefore, the concentration is reported as estimated.

F RPD exceeded lab control limits.

J The target analyte was positively identified below the quantiation limit and above the detection limit.

U Analyte was not detected.

L The LCS data for this analytical batch was reported below the laboratory control limits for this analyte. The department supervisor and QA Director reviewed data. The samples were either reanalyzed or flagged as estimated concentrations.

H The LCS data for this analytical batch was reported above the laboratory control limits. Supporting QC Data were reviewed by the Department Supervisor and QA Director. Data were determined to be valid for reporting.

K Sample analyzed outside of recommended hold time.

JN A combination of the "N" and the "J" qualifier. The analysis indicates that the analyte is "tentatively identified" and the associated numerical value may not be consistent with the amount actually present in the environmental sample.

* Surrogate recovered outside laboratory control limit.

BRL Below Reporting Limit.

RL Reporting Limit

MDL Method Detection Limit **SDL** Sample Detection Limit **LOD** Limit of Detection

PQL Practical Quantitation Limit **MQL** Method Quantitation Limit **LOQ** Limit of Quantitation

DL Method Detection Limit

NC Non-Calculable

+ NELAC certification not offered for this compound.

***** (Next to analyte name or method description) = Outside XENCO's scope of NELAC accreditation

Becky Haskell:

We are reporting to you the results of the analyses performed on the samples received under the project name referenced above and identified with the XENCO Report Number(s) 460955. All results being reported under this Report Number apply to the samples analyzed and properly identified with a Laboratory ID number. Subcontracted analyses are identified in this report with either the NELAC certification number of the subcontract lab in the analyst ID field, or the complete subcontracted report attached to this report.

Unless otherwise noted in a Case Narrative, all data reported in this Analytical Report are in compliance with NELAC standards. The uncertainty of measurement associated with the results of analysis reported is available upon request. Should insufficient sample be provided to the laboratory to meet the method and NELAC Matrix Duplicate and Matrix Spike requirements, then the data will be analyzed, evaluated and reported using all other available quality control measures.

The validity and integrity of this report will remain intact as long as it is accompanied by this letter and reproduced in full, unless written approval is granted by XENCO Laboratories. This report will be filed for at least 5 years in our archives after which time it will be destroyed without further notice, unless otherwise arranged with you. The samples received, and described as recorded in Report No. 460955 will be filed for 60 days, and after that time they will be properly disposed without further notice, unless otherwise arranged with you. We reserve the right to return to you any unused samples, extracts or solutions related to them if we consider so necessary (e.g., samples identified as hazardous waste, sample sizes exceeding analytical standard practices, controlled substances under regulated protocols, etc).

We thank you for selecting XENCO Laboratories to serve your analytical needs. If you have any questions concerning this report, please feel free to contact us at any time.

Respectfully,

Nicholas Straccione
Project Manager

Flagging Criteria

X In our quality control review of the data a QC deficiency was observed and flagged as noted. MS/MSD recoveries were found to be outside of the laboratory control limits due to possible matrix /chemical interference, or a concentration of target analyte high enough to affect the recovery of the spike concentration. This condition could also affect the relative percent difference in the MS/MSD.

B A target analyte or common laboratory contaminant was identified in the method blank. Its presence indicates possible field or laboratory contamination.

D The sample(s) were diluted due to targets detected over the highest point of the calibration curve, or due to matrix interference. Dilution factors are included in the final results. The result is from a diluted sample.

E The data exceeds the upper calibration limit; therefore, the concentration is reported as estimated.

F RPD exceeded lab control limits.

J The target analyte was positively identified below the quantiation limit and above the detection limit.

U Analyte was not detected.

L The LCS data for this analytical batch was reported below the laboratory control limits for this analyte. The department supervisor and QA Director reviewed data. The samples were either reanalyzed or flagged as estimated concentrations.

H The LCS data for this analytical batch was reported above the laboratory control limits. Supporting QC Data were reviewed by the Department Supervisor and QA Director. Data were determined to be valid for reporting.

K Sample analyzed outside of recommended hold time.

JN A combination of the "N" and the "J" qualifier. The analysis indicates that the analyte is "tentatively identified" and the associated numerical value may not be consistent with the amount actually present in the environmental sample.

* Surrogate recovered outside laboratory control limit.

BRL Below Reporting Limit.

RL Reporting Limit

MDL Method Detection Limit **SDL** Sample Detection Limit **LOD** Limit of Detection

PQL Practical Quantitation Limit **MQL** Method Quantitation Limit **LOQ** Limit of Quantitation

DL Method Detection Limit

NC Non-Calculable

\+ NELAC certification not offered for this compound.

Curt Stanley:

We are reporting to you the results of the analyses performed on the samples received under the project name referenced above and identified with the XENCO Report Number(s) 479905. All results being reported under this Report Number apply to the samples analyzed and properly identified with a Laboratory ID number. Subcontracted analyses are identified in this report with either the NELAC certification number of the subcontract lab in the analyst ID field, or the complete subcontracted report attached to this report.

Unless otherwise noted in a Case Narrative, all data reported in this Analytical Report are in compliance with NELAC standards. The uncertainty of measurement associated with the results of analysis reported is available upon request. Should insufficient sample be provided to the laboratory to meet the method and NELAC Matrix Duplicate and Matrix Spike requirements, then the data will be analyzed, evaluated and reported using all other available quality control measures.

The validity and integrity of this report will remain intact as long as it is accompanied by this letter and reproduced in full, unless written approval is granted by XENCO Laboratories. This report will be filed for at least 5 years in our archives after which time it will be destroyed without further notice, unless otherwise arranged with you. The samples received, and described as recorded in Report No. 479905 will be filed for 60 days, and after that time they will be properly disposed without further notice, unless otherwise arranged with you. We reserve the right to return to you any unused samples, extracts or solutions related to them if we consider so necessary (e.g., samples identified as hazardous waste, sample sizes exceeding analytical standard practices, controlled substances under regulated protocols, etc).

We thank you for selecting XENCO Laboratories to serve your analytical needs. If you have any questions concerning this report, please feel free to contact us at any time.

Respectfully,

Kelsey Brooks

Flagging Criteria

X In our quality control review of the data a QC deficiency was observed and flagged as noted. MS/MSD recoveries were found to be outside of the laboratory control limits due to possible matrix /chemical interference, or a concentration of target analyte high enough to affect the recovery of the spike concentration. This condition could also affect the relative percent difference in the MS/MSD.

B A target analyte or common laboratory contaminant was identified in the method blank. Its presence indicates possible field or laboratory contamination.

D The sample(s) were diluted due to targets detected over the highest point of the calibration curve, or due to matrix interference. Dilution factors are included in the final results. The result is from a diluted sample.

E The data exceeds the upper calibration limit; therefore, the concentration is reported as estimated.

F RPD exceeded lab control limits.

J The target analyte was positively identified below the quantitation limit and above the detection limit.

U Analyte was not detected.

L The LCS data for this analytical batch was reported below the laboratory control limits for this analyte. The department supervisor and QA Director reviewed data. The samples were either reanalyzed or flagged as estimated concentrations.

H The LCS data for this analytical batch was reported above the laboratory control limits. Supporting QC Data were reviewed by the Department Supervisor and QA Director. Data were determined to be valid for reporting.

K Sample analyzed outside of recommended hold time.

JN A combination of the "N" and the "J" qualifier. The analysis indicates that the analyte is "tentatively identified" and the associated numerical value may not be consistent with the amount actually present in the environmental sample.

** Surrogate recovered outside laboratory control limit.

BRL Below Reporting Limit.

RL Reporting Limit

MDL Method Detection Limit **SDL** Sample Detection Limit **LOD** Limit of Detection

PQL Practical Quantitation Limit **MQL** Method Quantitation Limit **LOQ** Limit of Quantitation

DL Method Detection Limit

NC Non-Calculable

+ NELAC certification not offered for this compound.

***** (Next to analyte name or method description) = Outside XENCO's scope of NELAC accreditation

Nikki Green:

We are reporting to you the results of the analyses performed on the samples received under the project name referenced above and identified with the XENCO Report Number(s) 522063. All results being reported under this Report Number apply to the samples analyzed and properly identified with a Laboratory ID number. Subcontracted analyses are identified in this report with either the NELAC certification number of the subcontract lab in the analyst ID field, or the complete subcontracted report attached to this report.

Unless otherwise noted in a Case Narrative, all data reported in this Analytical Report are in compliance with NELAC standards. The uncertainty of measurement associated with the results of analysis reported is available upon request. Should insufficient sample be provided to the laboratory to meet the method and NELAC Matrix Duplicate and Matrix Spike requirements, then the data will be analyzed, evaluated and reported using all other available quality control measures.

The validity and integrity of this report will remain intact as long as it is accompanied by this letter and reproduced in full, unless written approval is granted by XENCO Laboratories. This report will be filed for at least 5 years in our archives after which time it will be destroyed without further notice, unless otherwise arranged with you. The samples received, and described as recorded in Report No. 522063 will be filed for 60 days, and after that time they will be properly disposed without further notice, unless otherwise arranged with you. We reserve the right to return to you any unused samples, extracts or solutions related to them if we consider so necessary (e.g., samples identified as hazardous waste, sample sizes exceeding analytical standard practices, controlled substances under regulated protocols, etc).

We thank you for selecting XENCO Laboratories to serve your analytical needs. If you have any questions concerning this report, please feel free to contact us at any time.

Respectfully,

Kelsey Brooks
Project Manager

Flagging Criteria

X In our quality control review of the data a QC deficiency was observed and flagged as noted. MS/MSD recoveries were found to be outside of the laboratory control limits due to possible matrix /chemical interference, or a concentration of target analyte high enough to affect the recovery of the spike concentration. This condition could also affect the relative percent difference in the MS/MSD.

B A target analyte or common laboratory contaminant was identified in the method blank. Its presence indicates possible field or laboratory contamination.

D The sample(s) were diluted due to targets detected over the highest point of the calibration curve, or due to matrix interference. Dilution factors are included in the final results. The result is from a diluted sample.

E The data exceeds the upper calibration limit; therefore, the concentration is reported as estimated.

F RPD exceeded lab control limits.

J The target analyte was positively identified below the quantitation limit and above the detection limit.

U Analyte was not detected.

L The LCS data for this analytical batch was reported below the laboratory control limits for this analyte. The department supervisor and QA Director reviewed data. The samples were either reanalyzed or flagged as estimated concentrations.

H The LCS data for this analytical batch was reported above the laboratory control limits. Supporting QC Data were reviewed by the Department Supervisor and QA Director. Data were determined to be valid for reporting.

K Sample analyzed outside of recommended hold time.

JN A combination of the "N" and the "J" qualifier. The analysis indicates that the analyte is "tentatively identified" and the associated numerical value may not be consistent with the amount actually present in the environmental sample.

** Surrogate recovered outside laboratory control limit.

BRL Below Reporting Limit.

RL Reporting Limit

MDL Method Detection Limit **SDL** Sample Detection Limit **LOD** Limit of Detection

PQL Practical Quantitation Limit **MQL** Method Quantitation Limit **LOQ** Limit of Quantitation

Nikki Green:

We are reporting to you the results of the analyses performed on the samples received under the project name referenced above and identified with the XENCO Report Number(s) 522237. All results being reported under this Report Number apply to the samples analyzed and properly identified with a Laboratory ID number. Subcontracted analyses are identified in this report with either the NELAC certification number of the subcontract lab in the analyst ID field, or the complete subcontracted report attached to this report.

Unless otherwise noted in a Case Narrative, all data reported in this Analytical Report are in compliance with NELAC standards. The uncertainty of measurement associated with the results of analysis reported is available upon request. Should insufficient sample be provided to the laboratory to meet the method and NELAC Matrix Duplicate and Matrix Spike requirements, then the data will be analyzed, evaluated and reported using all other available quality control measures.

The validity and integrity of this report will remain intact as long as it is accompanied by this letter and reproduced in full, unless written approval is granted by XENCO Laboratories. This report will be filed for at least 5 years in our archives after which time it will be destroyed without further notice, unless otherwise arranged with you. The samples received, and described as recorded in Report No. 522237 will be filed for 60 days, and after that time they will be properly disposed without further notice, unless otherwise arranged with you. We reserve the right to return to you any unused samples, extracts or solutions related to them if we consider so necessary (e.g., samples identified as hazardous waste, sample sizes exceeding analytical standard practices, controlled substances under regulated protocols, etc).

We thank you for selecting XENCO Laboratories to serve your analytical needs. If you have any questions concerning this report, please feel free to contact us at any time.

Respectfully,

Kelsey Brooks
Project Manager

Flagging Criteria

X In our quality control review of the data a QC deficiency was observed and flagged as noted. MS/MSD recoveries were found to be outside of the laboratory control limits due to possible matrix /chemical interference, or a concentration of target analyte high enough to affect the recovery of the spike concentration. This condition could also affect the relative percent difference in the MS/MSD.

B A target analyte or common laboratory contaminant was identified in the method blank. Its presence indicates possible field or laboratory contamination.

D The sample(s) were diluted due to targets detected over the highest point of the calibration curve, or due to matrix interference. Dilution factors are included in the final results. The result is from a diluted sample.

E The data exceeds the upper calibration limit; therefore, the concentration is reported as estimated.

F RPD exceeded lab control limits.

J The target analyte was positively identified below the quantitation limit and above the detection limit.

U Analyte was not detected.

L The LCS data for this analytical batch was reported below the laboratory control limits for this analyte. The department supervisor and QA Director reviewed data. The samples were either reanalyzed or flagged as estimated concentrations.

H The LCS data for this analytical batch was reported above the laboratory control limits. Supporting QC Data were reviewed by the Department Supervisor and QA Director. Data were determined to be valid for reporting.

K Sample analyzed outside of recommended hold time.

JN A combination of the "N" and the "J" qualifier. The analysis indicates that the analyte is "tentatively identified" and the associated numerical value may not be consistent with the amount actually present in the environmental sample.

** Surrogate recovered outside laboratory control limit.

BRL Below Reporting Limit.

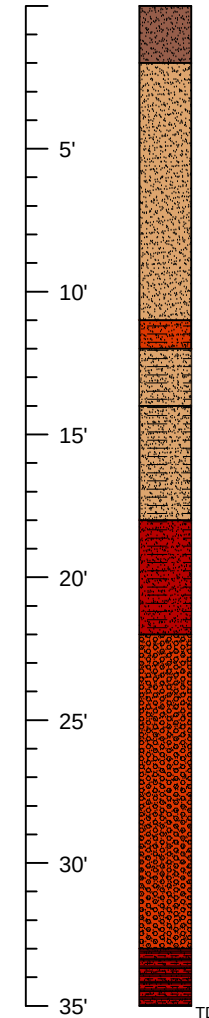
Soil Boring Log SB-3



Odor	Chloride Field Screen	Soil Description
		0 - 2' - Brown silty fine grained sand. well rounded well sorted. Some caliche nodules.
None	<112	2 - 11' - Tan, fine to very fine grained sand, well rounded and sorted.
None	164	11 - 12' - Red hard fine grained sandstone layer with tan medium to fine sand. Sub-rounded moderately sorted.
None	136	12 - 14' - Tan medium to fine sand with some red hard fine grained sandstone. Sub rounded moderately sorted.
		14 - 18' - Tan fine grained sand interbeded with soft white calcareous sandstone. Sub-angular to sub-rounded and poorly sorted.
None	164	18 - 22' - Red hard fine grained sandstone layer with tan medium to fine sand. Clear quartz pebbles.
None	<112	22 - 33' - Reddish tan, silty medium to fine graine sand with heavy gravel. Angular to sub-rounded and poorly sorted. Some clay content
None	<112	
None	No Reading	33 - 35' - Red fine grained sand. well rounded well sorted. High clay content.

Soil Boring Details

Date Drilled 2-19-14

Depth of Exploratory Well 35 ft

Depth to Water N/A

Completion Notes

1. Soil boring was plugged same day. Using Air Rotary drilling Technique.
2. 8 bags of Bentonite and 1 bag of Cement.
3. 2' Concrete seal at top.

Latitude 32 degrees 08.142' North **Longitude** 103 degrees 10.729' West

NATURE OF RELEASE

Type of Release Natural Gas, Crude Oil and Produced Water	Volume of Release 25 bbls	Volume Recovered None
Source of Release 4 inch Natural Gas Pipeline	Date and Hour of Occurrence Unknown	Date and Hour of Discovery February 18, 2013 – 1108 hours
Was Immediate Notice Given? ☒ Yes ☐ No ☐ Not Required	If YES, To Whom? Geoff Leking (NMOCD District 1)	
By Whom? Curt Stanley	Date and Hour February 18, 2013 - 1531 hours	
Was a Watercourse Reached? ☐ Yes ☒ No	If YES, Volume Impacting the Watercourse.	

If a Watercourse was Impacted, Describe Fully.*

Describe Cause of Problem and Remedial Action Taken.*
A four (4)-inch low pressure steel natural gas pipeline developed a leak, resulting in a release of natural gas, crude oil and produced water. During initial response activities the pipeline was clamped to mitigate the release. The affected steel pipeline will be cut and capped and permanently taken out of service.

Describe Area Affected and Cleanup Action Taken.*
An irregular area measuring approximately 60 feet in width and 200 feet in length was impacted by the release. On February 18, 2013, saturated soil was scraped from the ground and stockpiled on 6 mil plastic. The saturated soil was transported to Sundance Services on February 22, 2013. The release will be remediated to NMOCD regulatory Standards.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.
