Mr. Boone:

Thank you for the additional information. NMOCD still will require additional depths to complete delineation for the area represented by SP4 and SP9 for 1RP-4817.

Olivia

Olivia,

The delineation was prompted by the state land office. We sampled all four corners seeing if there was contamination and at sp4 is a low point where water gathers. And sp9 we met refusal we were unable to get any deeper with our equipment.

Mr. Johnston:

Please address these concerns regarding the workplan for 1RP-4817:

- Vertical delineation at SP4 and SP9 is not considered complete. Is there a plan to finish vertical delineation?
- SP4 is not located in a visibly impacted area on Figure 3. Is there a rationale?

Thanks,
Olivia
