## APPROVED

By Olivia Yu at 4:10 pm, Mar 08, 2018

NMOCD approves of the delineation completed for 1RP-4965 and the proposed remediation plan. Backfill approval is granted for the excavated area on the wellpad.

Re: Remediation Workplan and Partial Backfill Request  
COG Boone 16 2H (1RP-4965)  
GPS: N 32.47246° W 103.57525°  
Unit Letter "O", Section 16, Township 21 South, Range 33 East  
Lea County, New Mexico

Dear Ms. Yu,

TRC Environmental Corporation (TRC) has prepared the following "Remediation Workplan and Partial Backfill Request" on behalf of Plains Pipeline, L.P. (Plains), in regard to the COG Boone 16 2H crude oil release site (1RP-4965). The release site is located approximately twenty (20) miles southeast of Monument in Lea County, New Mexico, in Unit Letter "O", Section 16, Township 21 South, Range 34 East. The GPS coordinates for the site are N 32.47246° and W 103.57525 °. The affected property is located on private land. A "Site Location Map" is provided as Attachment #1

On February 5, 2018, a release was discovered on the LACT Unit at COG Operating's Boone 16 2H production facility. The release was attributed to the failure of a one-half (1/2) inch (in.) nipple, resulting in a release of approximately fifty (50) barrels (bbls) of crude oil. The release affected an area on the caliche well pad measuring approximately 6,100 sq. ft. Overspray from the release affected an area within the pasture north of the facility measuring approximately 50,000 sq. ft. During initial response activities, approximately forty-five (45) bbls of crude oil were recovered and saturated soils were excavated by hand and stockpiled on-site atop a polyurethane liner.

A reference map utilized by the New Mexico Oil Conservation Division (NMOCD) indicated groundwater should be encountered at approximately one hundred forty (140) ft. below ground surface (bgs). No surface waters or water wells were observed within one thousand (1,000) ft. of the release site. Based on the NMOCD Site Classification criteria, the Recommended Remediation Action Levels (RRAL) are 10 mg/kg for benzene, 50 mg/kg for benzene, toluene, ethylbenzene and xylene (BTEX) and 5,000 mg/kg for total petroleum hydrocarbons (TPH).

## **Field Activities**

On February 9, 2018, remediation activities commenced at the release site. Areas within the pasture affected by overspray were washed down and treated with approximately 1,500 gallons of a Microblaze® solution over the course or three (3) days in accordance with the landowner. Saturated soils adjacent to the affected LACT unit and above ground piping was excavated by hand. Excavated soil was stockpiled on-site, atop an impermeable liner.

On February 13, 2018, TRC conducted an initial delineation event at the site. During the delineation event, a series of hand-augered soil bores (SP-1 through SP-3) were advanced within the affected area in an effort to characterize the vertical extent of soil impacts. SP-1 was advanced on the caliche well pad, SP-2 was advanced within a pooling area on the north side of the tank battery, and SP-3 was advanced in the primary pooling area on the east side of the tank battery. During the advancement of the soil bores, three (3) soil samples (SP-1 @ 1', SP-2 @ 3', SP-3 @ 5') were collected and submitted to the laboratory for analysis of BTEX, TPH and chloride concentration. Laboratory analytical results indicated benzene concentrations were less than the applicable laboratory reporting limit (RL) in each of the submitted soil samples. BTEX concentrations were less than the applicable laboratory RL in each of the submitted soil sample with the exception of SP-3 @ 5', which exhibited a BTEX concentration of 0.00956 mg/kg. Chloride concentrations were less than the applicable laboratory RL in each of the submitted soil samples with the exception of SP-1 @ 1', which exhibited a chloride concentration of 456 mg/kg.

Additional confirmation soil samples (SP-1 @ 2', SP-2 @ 4', SP-3 @ 6'), collected from deeper intervals, were submitted to the laboratory for analysis of TPH concentrations which were determined to be below the NMOCD RRAL. Based on laboratory analytical results from delineation soil samples it was determined that soil was not affected above the NMOCD RRAL beyond one (1) ft. bgs in the area characterized by sample point SP-1, three (3) ft. bgs in the area characterized by sample point SP-3 and five (5) ft. bgs in the area characterized by sample point SP-3.

In addition, eight (8) soil samples (OS-1 @ 0-3", OS-1 @ 6", OS-2 @ 0-3", OS-2 @ 6", OS-3 @ 0-3", OS-3 @ 6", OS-4 @ 0-3" and OS-4 @ 6") were collected from within the affected pasture and submitted to the laboratory for analysis of TPH and chloride concentrations. Laboratory analytical results indicated TPH concentrations ranged from less than the applicable laboratory RL in soil sample OS-3 @ 6" and OS-4 @ 6" to 1,384.5 mg/kg in soil sample OS-2 @ 0-3". Chloride concentrations were less than the applicable laboratory RL in each of the submitted soil samples with the exception of OS-1 @ 6", which exhibited a chloride concentration of 6.43 mg/kg.

Upon receiving laboratory analytical results from delineation soil samples, excavation activities commenced at the release site. The affected area on the caliche well pad was excavated to approximately one (1) ft. bgs. Upon excavating impacted soil on the caliche well pad, twenty (20) excavation confirmation soil samples (SP-1 FL-1, SP-1 FL-2, SP-1 FL-3, SP-1 FL-4, SP-1 FL-5, SP-1 FL-6, SP-1 NSW, SP-1 ESW 1, SP-1 ESW 2, SP-1 ESW 3, SP-1 ESW 4, SP-1 ESW 5, SP-1 SSW 1, SP-1 SSW 2, SP-1 SSW 3, SP-1 WSW 1, SP-1 WSW 2, SP-1 WSW 3, SP-1 WSW 4 and SP-1 WSW 5) were collected from the floor and sidewalls of the excavated area and submitted to the laboratory for analysis of BTEX and TPH concentrations. Laboratory analytical results indicated BTEX concentrations ranged from less than the applicable laboratory RL in soil samples SP-1 FL-1, SP-1 FL-3, SP-1 NSW, SP-1 ESW 1, SP-1 ESW 2, SP-1 ESW 3, SP-1 ESW 4, SP-1 ESW 5, SP-1 SSW 2, SP-1 WSW 1, SP-1 WSW 2, SP-1 WSW 3, SP-1 WSW 4 and SP-1 WSW 5 to 0.0615 mg/kg in soil sample SP-1 SSW 3. TPH

concentrations ranged from less than the applicable laboratory RL in soil samples SP-1 ESW 2, SP-1 ESW 4 and SP-1 WSW 1 to 2,827.1 mg/kg in soil sample SP-1 SSW 3. Laboratory analytical results indicated BTEX and TPH concentrations were below the NMOCD RRAL in each of the submitted soil samples. A “Site & Sample Location Map” is provided as Attachment #2. A “Soil Chemistry Table” is provided as Attachment #3.

## **Proposed Activities**

Plains proposes the following field activities designed to advance the Boone 16 2H Release toward and NMOCD-approved closure:

### **Remediation Strategy**

#### **Pasture Area**

- Continue to monitor effectiveness of the Microblaze® washing/treatment of the pasture area affected by the light overspray.
- Hand-dig and/or “till” any areas inferred to be affected above the NMOCD RRAL, or exhibiting evidences of hydrocarbon impact unacceptable to the landowner.
- Collect confirmation soil samples for laboratory analysis of BTEX concentrations.
- Reseed the affected area with a landowner approved seed mixture in the Spring, as per the landowner.

#### **Well Pad and Pooling Areas**

- Utilizing mechanical equipment and/or shovels, excavate impacted soil within the release margins. Excavated soil will be temporarily stockpiled on-site, atop an impermeable liner, pending transportation to an NMOCD-permitted facility for disposal.
- The floor and sidewalls of the excavation will be advanced until laboratory analytical results from confirmation soil samples indicate BTEX and TPH concentrations are below the NMOCD RRAL.
- The collection of representative soil samples from the floor and sidewalls of the excavated area at increments not to exceed every fifty 50 linear ft. for confirmation analysis of BTEX and TPH. Select soil samples will also be analyzed for chloride.
- Upon receiving laboratory analytical from excavation confirmation soil samples, the excavated area will be backfilled with locally sourced, non-impacted material.
- Transport impacted soil to an NMOCD-permitted facility for disposal.

#### **Partial Backfill Request**

Based on laboratory analytical results from confirmation soil samples collected from the excavated area on the caliche well pad (SP-1 FL-1, SP-1 FL-2, SP-1 FL-3, SP-1 FL-4, SP-1 FL-5, SP-1 FL-6, SP-1 NSW, SP-1 ESW 1, SP-1 ESW 2, SP-1 ESW 3, SP-1 ESW 4, SP-1 ESW 5, SP-1 SSW 1, SP-1 SSW 2, SP-1 SSW 3, SP-1 WSW 1, SP-1 WSW 2, SP-1 WSW 3, SP-1 WSW 4 and SP-1 WSW 5), Plains request NMOCD permission to backfill the excavated areas with locally sourced, non-impacted caliche.

Timely backfilling of the excavated area on the caliche well pad will assist in restoring the function of the well pad and gaining access to portions of the release site.

Upon completion of remediation activities, a “Remediation Summary and Soil Closure Request” will be prepared summarizing field activities and laboratory analytical results from confirmation soil samples. If you have any questions or need any additional information, please feel free to contact Joel Lowry or Amber Groves by phone or email.

**RECEIVED**

**By Olivia Yu at 9:31 am, Feb 12, 2018**

Describe Cause of Problem and Remedial Action Taken.* ½" nipple broke on the downstream side of the triplex pump. The nipple broke below the valve where chemical is injected.
Describe Area Affected and Cleanup Action Taken.* Impacted area includes the pad, approximately 50,000 square feet off of the pad including an overspray area. All areas will be remediated as per current NMOCD guidelines.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.

**Joel Lowry:**

We are reporting to you the results of the analyses performed on the samples received under the project name referenced above and identified with the XENCO Report Number(s) 576746. All results being reported under this Report Number apply to the samples analyzed and properly identified with a Laboratory ID number. Subcontracted analyses are identified in this report with either the NELAC certification number of the subcontract lab in the analyst ID field, or the complete subcontracted report attached to this report.

Unless otherwise noted in a Case Narrative, all data reported in this Analytical Report are in compliance with NELAC standards. The uncertainty of measurement associated with the results of analysis reported is available upon request. Should insufficient sample be provided to the laboratory to meet the method and NELAC Matrix Duplicate and Matrix Spike requirements, then the data will be analyzed, evaluated and reported using all other available quality control measures.

The validity and integrity of this report will remain intact as long as it is accompanied by this letter and reproduced in full, unless written approval is granted by XENCO Laboratories. This report will be filed for at least 5 years in our archives after which time it will be destroyed without further notice, unless otherwise arranged with you. The samples received, and described as recorded in Report No. 576746 will be filed for 45 days, and after that time they will be properly disposed without further notice, unless otherwise arranged with you. We reserve the right to return to you any unused samples, extracts or solutions related to them if we consider so necessary (e.g., samples identified as hazardous waste, sample sizes exceeding analytical standard practices, controlled substances under regulated protocols, etc).

We thank you for selecting XENCO Laboratories to serve your analytical needs. If you have any questions concerning this report, please feel free to contact us at any time.

Respectfully,

**Kelsey Brooks**

- X** In our quality control review of the data a QC deficiency was observed and flagged as noted. MS/MSD recoveries were found to be outside of the laboratory control limits due to possible matrix /chemical interference, or a concentration of target analyte high enough to affect the recovery of the spike concentration. This condition could also affect the relative percent difference in the MS/MSD.
- B** A target analyte or common laboratory contaminant was identified in the method blank. Its presence indicates possible field or laboratory contamination.
- D** The sample(s) were diluted due to targets detected over the highest point of the calibration curve, or due to matrix interference. Dilution factors are included in the final results. The result is from a diluted sample.
- E** The data exceeds the upper calibration limit; therefore, the concentration is reported as estimated.
- F** RPD exceeded lab control limits.
- J** The target analyte was positively identified below the quantitation limit and above the detection limit.
- U** Analyte was not detected.
- L** The LCS data for this analytical batch was reported below the laboratory control limits for this analyte. The department supervisor and QA Director reviewed data. The samples were either reanalyzed or flagged as estimated concentrations.
- H** The LCS data for this analytical batch was reported above the laboratory control limits. Supporting QC Data were reviewed by the Department Supervisor and QA Director. Data were determined to be valid for reporting.
- K** Sample analyzed outside of recommended hold time.
- JN** A combination of the "N" and the "J" qualifier. The analysis indicates that the analyte is "tentatively identified" and the associated numerical value may not be consistent with the amount actually present in the environmental sample.

\*\* Surrogate recovered outside laboratory control limit.

**BRL** Below Reporting Limit.

**RL** Reporting Limit

**MDL** Method Detection Limit      **SDL** Sample Detection Limit      **LOD** Limit of Detection

**PQL** Practical Quantitation Limit      **MQL** Method Quantitation Limit      **LOQ** Limit of Quantitation

**DL** Method Detection Limit

**NC** Non-Calculable

+ NELAC certification not offered for this compound.

\* (Next to analyte name or method description) = Outside XENCO's scope of NELAC accreditation

Notice: No signature of this document and relinquishment of samples constitutes a valid purchase order from client company to Xenco, its affiliates and subcontractors. It assigns standard terms and conditions of service. Xenco will be liable only for the cost of samples and shall not assume any responsibility for any losses or expenses incurred by the Client if such losses are due to circumstances beyond the control of Xenco. A minimum charge of \$75 will be applied to each project. Xenco's liability will be limited to the cost of samples. Any samples received by Xenco but not analyzed will be invoiced at \$5 per sample. These terms will be enforced unless previously negotiated under a fully executed client contract.

## Prelogin/Nonconformance Report- Sample Log-In

**Client:** TRC Solutions, Inc

**Date/ Time Received:** 02/16/2018 11:30:00 AM

**Work Order #:** 576746

**Acceptable Temperature Range:** 0 - 6 degC  
**Air and Metal samples Acceptable Range:** Ambient  
**Temperature Measuring device used :** R8

<b>Sample Receipt Checklist</b>	<b>Comments</b>
#1 *Temperature of cooler(s)?	1.9
#2 *Shipping container in good condition?	Yes
#3 *Samples received on ice?	Yes
#4 *Custody Seals intact on shipping container/ cooler?	N/A
#5 Custody Seals intact on sample bottles?	N/A
#6* Custody Seals Signed and dated?	N/A
#7 *Chain of Custody present?	Yes
#8 Any missing/extra samples?	No
#9 Chain of Custody signed when relinquished/ received?	Yes
#10 Chain of Custody agrees with sample labels/matrix?	Yes
#11 Container label(s) legible and intact?	Yes
#12 Samples in proper container/ bottle?	Yes
#13 Samples properly preserved?	Yes
#14 Sample container(s) intact?	Yes
#15 Sufficient sample amount for indicated test(s)?	Yes
#16 All samples received within hold time?	Yes
#17 Subcontract of sample(s)?	No
#18 Water VOC samples have zero headspace?	N/A

\* Must be completed for after-hours delivery of samples prior to placing in the refrigerator

Project Address: Lea County, NM

**Joel Lowry:**

We are reporting to you the results of the analyses performed on the samples received under the project name referenced above and identified with the XENCO Report Number(s) 577385. All results being reported under this Report Number apply to the samples analyzed and properly identified with a Laboratory ID number. Subcontracted analyses are identified in this report with either the NELAC certification number of the subcontract lab in the analyst ID field, or the complete subcontracted report attached to this report.

Unless otherwise noted in a Case Narrative, all data reported in this Analytical Report are in compliance with NELAC standards. The uncertainty of measurement associated with the results of analysis reported is available upon request. Should insufficient sample be provided to the laboratory to meet the method and NELAC Matrix Duplicate and Matrix Spike requirements, then the data will be analyzed, evaluated and reported using all other available quality control measures.

The validity and integrity of this report will remain intact as long as it is accompanied by this letter and reproduced in full, unless written approval is granted by XENCO Laboratories. This report will be filed for at least 5 years in our archives after which time it will be destroyed without further notice, unless otherwise arranged with you. The samples received, and described as recorded in Report No. 577385 will be filed for 45 days, and after that time they will be properly disposed without further notice, unless otherwise arranged with you. We reserve the right to return to you any unused samples, extracts or solutions related to them if we consider so necessary (e.g., samples identified as hazardous waste, sample sizes exceeding analytical standard practices, controlled substances under regulated protocols, etc).

We thank you for selecting XENCO Laboratories to serve your analytical needs. If you have any questions concerning this report, please feel free to contact us at any time.

Respectfully,

**Kelsey Brooks**

**Analytical non conformances and comments:**

Batch: LBA-3042198 BTEX by EPA 8021

Lab Sample ID 577385-009 was randomly selected for Matrix Spike/Matrix Spike Duplicate (MS/MSD). Benzene, Ethylbenzene, Toluene, m,p-Xylenes, o-Xylene recovered below QC limits in the Matrix Spike and Matrix Spike Duplicate. Outlier/s are due to possible matrix interference. Samples in the analytical batch are: 577385-008, -009, -010, -011, -012, -013, -014, -015, -016, -017, -018, -019, -020.

The Laboratory Control Sample for Toluene, Benzene, Ethylbenzene, m,p-Xylenes, o-Xylene is within laboratory Control Limits, therefore the data was accepted.

Soil samples were not received in Terracore kits and therefore were prepared by method 5030.

Batch: LBA-3042224 BTEX by EPA 8021

Soil samples were not received in Terracore kits and therefore were prepared by method 5030.

Batch: LBA-3042346 BTEX by EPA 8021

Soil samples were not received in Terracore kits and therefore were prepared by method 5030.

- X** In our quality control review of the data a QC deficiency was observed and flagged as noted. MS/MSD recoveries were found to be outside of the laboratory control limits due to possible matrix /chemical interference, or a concentration of target analyte high enough to affect the recovery of the spike concentration. This condition could also affect the relative percent difference in the MS/MSD.
- B** A target analyte or common laboratory contaminant was identified in the method blank. Its presence indicates possible field or laboratory contamination.
- D** The sample(s) were diluted due to targets detected over the highest point of the calibration curve, or due to matrix interference. Dilution factors are included in the final results. The result is from a diluted sample.
- E** The data exceeds the upper calibration limit; therefore, the concentration is reported as estimated.
- F** RPD exceeded lab control limits.
- J** The target analyte was positively identified below the quantitation limit and above the detection limit.
- U** Analyte was not detected.
- L** The LCS data for this analytical batch was reported below the laboratory control limits for this analyte. The department supervisor and QA Director reviewed data. The samples were either reanalyzed or flagged as estimated concentrations.
- H** The LCS data for this analytical batch was reported above the laboratory control limits. Supporting QC Data were reviewed by the Department Supervisor and QA Director. Data were determined to be valid for reporting.
- K** Sample analyzed outside of recommended hold time.
- JN** A combination of the "N" and the "J" qualifier. The analysis indicates that the analyte is "tentatively identified" and the associated numerical value may not be consistent with the amount actually present in the environmental sample.

\*\* Surrogate recovered outside laboratory control limit.

**BRL** Below Reporting Limit.

**RL** Reporting Limit

**MDL** Method Detection Limit      **SDL** Sample Detection Limit      **LOD** Limit of Detection

**PQL** Practical Quantitation Limit      **MQL** Method Quantitation Limit      **LOQ** Limit of Quantitation

**DL** Method Detection Limit

**NC** Non-Calculable

+ NELAC certification not offered for this compound.
