Ms. Donald:

The final C-141 is not accepted for 1RP-4168. There are two USGS wells identified within 1 mile radius with estimated depth to groundwater between 51-100 ft. bgs. Furthermore, a NMOSE monitoring well (L-13394), 1 mile North of the release location indicated depth to groundwater at approximately 85 ft. bgs in 2013. At a minimum, confirmatory soil samples of the presumed release location are required.

Please be advised that aerial imagery from February 2, 2017, captured an apparent reportable release at the facility, approximately 200 ft. North of the release location (see attached). NMOCD does not have a record of this incident. Please inform.

NMOCD database indicates State minerals and State surface for the Unit Letter K as written. GPS coordinates placed the release in L11. NMSLO can verify.

Thanks,
Olivia

Subject: electronic copies of reports

Mr. McDaniel:

For the reports dropped off at the NMOCD-Hobbs office today, please submit them in electronic format as well. I do not work with paper copies.

Thanks,

Olivia Yu

OCD approval does not relieve the operator of liability should their operations fail to adequately investigate and remediate contamination that may pose a threat to ground water, surface water, human health or the environment. In addition, OCD approval does not relieve the operator of responsibility for compliance with any other federal, state, local laws and/or regulations.
