May 8, 2018

Andrew Cobb – Energen

Kris Williams – Terracon

The Oil Conservation Division (OCD) in New Mexico is in receipt of the 2017 Annual Groundwater Monitoring Report for the West Lovington Strawn Unit #8 with 1R-2457 identification. Data and site requests were made.

The following:

1. It is approved for monitor wells MW's 1 thru 6 for chloride evaluation using EPA Method 300.0 of site groundwater.
2. New monitor well identified as MW-7 should, if possible be moved an additional 60-80 feet to the southwest, if access allows.
3. OCD requires soil samples for chloride evaluation at 10 foot intervals to the air water interface, well defined log of soils and use of EPA 300.0 Method for analysis.
4. Add new well (MW-7) to sampling sequence for site when logistics allow.
5. Terracon schedule, sampling protocol and Methodologies for analysis are approved.

If there are any questions or comments, please contact this office. We appreciate your time and efforts on this issue.

Sincerely,

Bradford Billings

EMNRD/OCD

Santa Fe

OCD approval does not relieve the operator of liability should their operations fail to adequately investigate and remediate contamination that may pose a threat to ground water, surface water, human health or the environment. In addition, OCD approval does not relieve the operator of responsibility for compliance with any other federal, state, local laws and/or regulations.
