Mr. Arguijo:

Several points for clarification in the closure report for 1RP-4762:

- 1. Was Floor #2 bottom sample taken at 4 ft. or 6 ft. bgs? In other words, was the specified area excavated to 4 ft. or 6 ft?
- 2. East Wall #2 sidewall sample was taken at 2.5 ft. bgs. So, the sample was taken on the side of the blue-shaded area, representing a 4 ft. excavation, including Floor 2 area, rather than the side of the green-shaded 1 ft. excavation. Correct?
- 3. Please be advised that delineation and remediation levels for chlorides are 600 mg/kg, regardless of depth to groundwater. Was there written documentation for the change of permissible chloride levels to 1000 mg/kg?

Thanks, Olivia
