Richard

You can set either a CIBP on top of the liner hanger/packer and cap it with 35 feet of cement by wire line or 25 SXS cement using tubing. If you do not want to use a CIBP you can set 25 sxs cement on top of the liner hanger and tag.

Paul Kautz  
Hobbs District Geologist

**Subject:** Plug Back to San Andres

Mr Brown, The attached well bore Schematic reflects a new well Drilled by Caza Operating, LLC that failed to produce in the Wolfcamp objective. We have decided to abandon the Horizontal Lateral and make an attempted completion in the San Andres. Note that the formation tops picked by our geologist are shown on the schematic. Please respond with a plugging procedure approved by your office. Should you need to contact me my number is shown below. Please note that we cannot get into the liner top. It appears to have collapsed. I've copied Donna not knowing whether this was your email so that she can get it to you if it isn't. Thanks, Richard Wright.
