The elevation of the derrick floor above sea level is 3747 ft. 18

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

This well was deepened to a total depth of 4034'. It was reached on 1-13-57. The interval 340-403' was cored. No shows of oil or gas were encountered. A log was run through open hole section 4034-3013'. Copies of these logs will be submitted when available.

This well was temporarily abandoned by pumping 2-3/8" (A) top. to bottom and filling the hole with 50 sacks of mud. 5" (B) csg. was completely filled. No casing was removed from well but was capped at surface and 4" (C) pipe marker installed.

The above work was done after verbal approval was obtained from John A. Frost, USGS District Engineer, Artesia, New Mexico, 1-21-57.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
