GAS CAPTURE PLAN

X Original Operator & OGRID No.: CHEVRON U S A INC 4323
 Amended Date: 11/28/2018
 Reason for Amendment: _____

This Gas Capture Plan outlines actions to be taken by the Operator to reduce well/production facility flaring/venting for new completion (new drill, recomple to new zone, re-frac) activity.

Note: A C-129 must be submitted and approved prior to exceeding 60 days allowed by Rule 19.15.18.12.A

Well(s)/Production Facility – Salado Draw CTB 23

The well(s) that will be located at the production facility are shown in the table below.

Well Name	API	Well Location (ULSTR)	Footages	Expected MCF/D	Flared or Vented	Comments
SD 14 23 FED P19 15H	Pending	UL:B, SEC 14, T26S- R32E	455' FNL, 1,505 FEL	5,000	0	
SD 14 23 FED P19 16H	Pending 30-021-45824	UL:B, SEC 14, T26S- R32E	455' FNL, 1,480 FEL	5,000	0	
SD 14 23 FED P19 17H	Pending	UL:B, SEC 14, T26S- R32E	455' FNL, 1,455 FEL	5,000	0	
SD 14 23 FED P19 18H	Pending	UL:B, SEC 14, T26S- R32E	455' FNL, 1,430 FEL	5,000	0	
SD 14 23 FED P19 19H	Pending	UL:B, SEC 14, T26S- R32E	455' FNL, 1,405 FEL	5,000	0	
SD 14 23 FED P19 20H	Pending	UL:B, SEC 14, T26S- R32E	455' FNL, 1,380 FEL	5,000	0	

Gathering System and Pipeline Notification

Well(s) will be connected to a production facility after flowback operations are complete, if gas transporter system is in place. The gas produced from production facility is dedicated to Delaware Basin Midstream, LLC (DBM) and will be connected to DBM's low pressure gathering system located in LEA County, New Mexico. The facility is already connected to a low pressure gathering system. Chevron provides (periodically) to DBM a drilling, completion and estimated first production date for wells that are scheduled to be drilled in the foreseeable future. In addition, Chevron and DBM have periodic conference calls to discuss changes to drilling and completion schedules. Gas from these wells will be processed at DBM's Ramsey Processing Plant located in Sec.36, Block 57-T1, Reeves County, Texas. The actual flow of the gas will be based on compression operating parameters and gathering system pressures.

Flowback Strategy

After the fracture treatment/completion operations, wells will be turned to permanent production facilities. Wells will have temporary sand catchers that will be installed at the well location to prevent sand from getting into the flowlines. These sand separators will be blown down periodically which will result in minimal venting of gas. Gas sales will start as soon as the wells start flowing through the production facilities, unless there are operational issues on DBM's system at that time. Based on current information, it is Chevron's belief the system can take this gas upon completion of the well(s).

Safety requirements during cleanout operations from the use of underbalanced air cleanout systems may necessitate that sand and non-pipeline quality gas be vented and/or flared rather than sold on a temporary basis.
