The elevation of the derrick floor above sea level is 4026 ft.

### DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

This well will be drilled to about 4300' to test the tough "C" formation.  
10-3/4" 32# surface casing will be circulated at about 200' with 175 sacks of cement.  
7-5/8" 26# intermediate casing will be circulated at about 4300' with 1500 sacks of Lite Water plus 200 sacks of regular cement.  
Drilling will be by rotary using mud. Shows will be tested by D.S.T. and if indications are of commercial value, 4-1/2" casing will be cemented with 150 sacks of regular plus 1/3 cu. ft. per sack of Strata-Creteplus 4% gel plus 200 sacks of Trinity Lite Water cement.  
The pay will be gun perforated and tested. A Gamma-ray neutron log will be made.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
