DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

This well will be drilled to about 9800' to test the rough "C" formation. 10-3/4", 320 surface casing will be circulated at about 200' with 175 sacks of cement. 7-5/8", 260 intermediate casing will be circulated at about 4300' with 1500 sacks of Trinity Lite Water plus 200 sacks of regular cement.

Drilling will be by rotary using mud. Shows will be tested by D.S.T. and if indications are of commercial value, 4-1/2" casing will be cemented through the pay and gas perforated. A gamma-ray neutron log will be made.

Spud date is set as April 20, 1961.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
