The elevation of the derrick floor above sea level is _____ ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

It is proposed to drill this well to a total depth of 12,000 feet or to a sufficient depth to properly test the Devonian formation. Approximately 375 feet of 13 3/8" surface casing will be set and cemented to the surface. Approximately 4300' of 9 5/8" or 8 3/8" intermediate string will be set and cemented with 1400 sacks.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
