The elevation of the derrick floor above sea level is **3935** ft. Est.

### DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

Proposed to drill well through Slaughter Pay horizon of San Andres formation to a tentative total depth of 5100 feet with rotary tools. Plan to set approximately 380 feet of 8-5/8" surface casing, circulating approximately 200 sacks of cement to surface. Plan to run electric and radio-active logs, run 9.5#, 4-1/2" O.D., J-55 oil string with float shoe and float collar on bottom to total depth, then cement with approximately 350 sacks of cement, circulating cement up across Yates formation estimated at 3000 feet. Perforate casing, run tubing and acidize formation with 5000 gallons of low surf. tension acid.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
