Describe Proposed or Completed Operations (Clearly state all pertinent details, and give pertinent dates, including estimated date of starting any proposed work) SEE RULE 1103.

This well was drilled in 1964 and completed as a San Andres producer. In 1966, permission was granted to complete the well in the Santa Rosa formation as a water source well for secondary recovery operations. Squeeze holes were shot in the 4-1/2" casing at 1950' (50 sacks), 1480' (42 sacks) and 1050' (cmt circ to surface with 300 sacks). The Santa Rosa was then perforated from 859'-1790' OA. A CIBP is set at 3701'. (See attached wellbore diagrams of current status and proposed P&A.)

I hereby certify that the information above is true and complete to the best of my knowledge and belief.
