DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

No surface water encountered on other wells in this area. Therefore, no surface casing will be run. 8-5/8" casing will be mudded at approximately 1200' and then recovered on completion. 7" casing will be cemented with 125 sacks around bottom and 25 sacks around top. TD expected to be 2850'.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
