(Other) Drill water supply well

(NOTE: Report results of multiple completion on Well Completion or Recompletion Report and Log form.)

17. DESCRIBE UNFINISHED OR COMPLETED OPERATIONS (Clearly state all pertinent details, and give pertinent dates, including estimated date of starting any proposed work. If well is directionally drilled, give subsurface locations and measured and true vertical depths for all markers and zones pertinent to this work.)

It is planned to drill a water supply well to provide water for drilling operations and general lease use. The well will penetrate the Ogallala sand. Twenty feet of 9 5/8" conductor pipe will be set. After a sufficient producing rate has been established, 6 5/8" casing will be run and gravel packed. A canned turbine pump powered by an electric generator will be used to produce the well.

As shown on Exhibit "A", the proposed water supply well will be located within 10 ft of the existing lease road by the proposed access road to the Culp Ranch Unit No. 2. The well will fall within the ROW of the existing road which has been covered by a previous surface use and operation plan and archeological survey.
