Miller Las New Mexico
 (Field) (County or Subdivision) (State or Territory)

The elevation of the derrick floor above sea level is _____ ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

It is our intention to drill a well at the above location to a total depth of approximately 1300'. All casing points will be cemented in accordance with approved methods of the U.S.G.S. and any other special requirements will be complied with.

It is planned to use the following casing pattern: 9 7/8" hole to be drilled, 7 1/2" OD 24' 8-40 casing to be set at approximately 1000' and cemented with 300 sacks, cement to be circulated. 6 3/4" hole to be drilled, 4 1/2" OD 9.30' 1-55 casing to be set at approximately 400' and cemented with 200 sacks. It is anticipated the cement behind the 4 1/2" casing will return to 2000'.

to reveal to produce this well upon completion is also requested.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
