FULL DETAILS OF PROPOSED PLAN OF WORK
(FOLLOW INSTRUCTIONS IN THE RULES AND REGULATIONS)

It is planned to go into New Mexico State A-2, a plugged and abandoned well in the Grayburg and San Andres formations with total depth at 4250 feet, and recomplete the well for salt water disposal in the San Andres formation below the oil-water contact. New Mexico Oil Conservation Commission Order R-909 authorizes Humble to re-enter State A-2 for the above expressed purpose. New total depth in the order is set at 4350 feet; however, it may be necessary to go as deep as approximately 5450 feet in order to find zones suitable for injection.

Attached is the proposed procedure. Also, attached is a schematic sketch of the well showing the location of cement plugs and other information and a cross section through the well.
