Dear Charlie:

A casing integrity test was conducted on your Buffalo Wallow State No. 1 in accordance with the regulations of the New Mexico Oil Conservation Division. The 5 1/2" casing in the well was tested from 5689 ft. to the surface of the ground. The beginning pressure was 600 PSI and after 30 minutes, the ending pressure was 580 PSI. The chart (which was used to record continuous pressures throughout the test) is enclosed. The pressure truck and pressure recorder were supplied and operated by Rowland Trucking Co. of Hobbs.

Other information concerning the well:

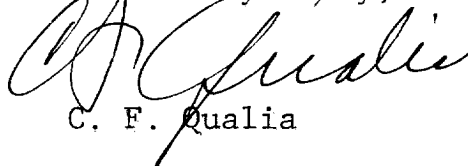

13 3/8" casing set at 460'-cement circulated

8 5/8" casing set at 3800'-cement circulated

5 1/2" casing set at 10,300'-calculated top of cement @ 3500'.

If you should need further details concerning the test, please let me know.

Yours very truly,

C. F. Qualia
