Subject: Application for Authority to Dually Complete The Ohio Oil Company's Wm. H. Turner Well No. 3, for Approval of an Unorthodox Well Location, and for Approval of an 80-acre Non-Standard Gas Proration Unit, consisting of the N/2 of SE/4, Section 29, T-21-S, R-37-E, Tubb Gas Pool, Lea County, New Mexico.

Mr. A. L. Porter, Jr.  
New Mexico Oil Conservation Commission  
P. O. Box 271  
Santa Fe, New Mexico

Dear Mr. Porter:

The Ohio Oil Company respectfully requests that you grant this application for authority to dually complete its Wm. H. Turner Well No. 3, located 1980' ESL and 100' FEL, Section 29, T-21-S, R-37-E. The Wm. H. Turner Well No. 3 was originally completed on October 1, 1949, as an oil well producing from the Mare Oil Pool. In June, 1956, the well was plugged back and recompleted as a single completion gas well producing from the Blinebry Gas Pool. The Ohio Oil Company now desires to dually complete the well in such a manner as to produce gas from the Tubb Gas Pool through the tubing and gas from the Blinebry Gas Pool through the production casing-tubing annulus. Ohio intends to install an efficient packer between the two zones and to perform the completion so as to prevent waste in each reservoir. A schematic diagram showing the proposed method for dually completing the well is attached. Subsequent to the completion, Ohio will present to the Commission data showing the detail completion program as well as plans for future testing which will be made regularly to determine that waste is not occurring in either reservoir.

The Ohio Oil Company further respectfully requests that you grant this application for the approval of the unorthodox location of the well stated above and for the designation and formation of an 80-acre non-standard gas proration unit consisting of the N/2 of SE/4, Section 29, T-21-S, R-37-E, Tubb Gas Pool, Lea County, New Mexico. The Ohio owns the oil and gas leasehold estate on the acreage included in proposed gas proration unit, and the well to be dually completed in the Blinebry and Tubb Gas Pools.
