If well is directionally drilled, give subsurface locations and measured and true vertical depths for all markers and zones pertinent to this work.)

Bilbrey 33 Federal #1 is a flowing gas well. It shares a Texaco gas sales line with a state well, Bilbrey 32 State Com #1 which is located in Unit Letter F, Sec. 32, T-21-S, R-32-E. Each well has its own separate tank battery. The Texaco gas sales line shared by the two well leads to an El Paso Natural Gas sales meter located in Unit Letter N of Sec. 4, T-22-S, R-32-E. Texaco has set a fifty barrel steel tank at the sales meter to hold any condensate coming off the gas separator also located at the sales meter. This tank is used as an emergency storage tank to hold any condensate that is sent down the sales line when there are problems at either of the two batteries. In the event of a problem at either of the batteries, the condensate that gathers in this fifty barrel tank is hauled back to the battery where the problem occurred. Texaco requests your approval of this emergency storage tank. A map of the referred area is attached.
