(State or Territory)

Not yet available. Will be reported when rig is moved in.

The elevation of the derrick floor above sea level is **0** ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

Application dated January 9, 1961 and approved January 11, 1961, showed the well to be located 1980' from the south line and 660' from the east line of the above described section. Plans have been changed so that the well is now to be drilled 330' north and 330' west of the original location, as shown above.

The original application indicated that 7-5/8" OD surface casing would be set. It is now proposed that 8-5/8" OD casing be set, in 11" hole, at 375', and cemented back to the surface with 250 **sz.** regular neat cement. Remainder of the original drilling and completion program remains unaltered.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
