DJR seeks approval for the commingling of oil production from the Mancos Formation underlying these pools and Leases at the **NAU CLF**. Pursuant to NMAC 19.15.12.10.C(4)(b), we enclose herewith DJR's Application for Surface Commingling (Diverse Ownership) completed on the Division's Form C-107-B. To ensure the protection of correlative rights, specific measurement methods will be implemented prior to commingling and defined allocation methods will be applied subsequent to commingling, both of which are more particularly described in Section B (4) of said Form C-107-B. DJR represents in this application that the proposed surface commingling is the most effective and efficient means of producing the associated reserves and will not reduce the production value.

DJR understands that approval granted under this application will not constitute the approval or grant of any right-of-way or construction rights not granted otherwise by lease or other separate instrument.

Enclosed is a list of the interest owners (including any owners of royalty or overriding royalty interests) affected by this application, an example of the letters sent by certified mail advising the interest owners that any objections must be filed in writing with the Division within 20 days from the date the Division receives this application, and proof of mailing. A copy of this application has been sent to the Bureau of Land Management since federal lands are involved and the State Land Office since State lands are involved.

Thank you for your attention to this matter, and please feel free to call if you have any questions or require additional information.

Sincerely,

Adam G. Rankin

Part II – Calculated Average Gravities / BTU of Commingle Production

The average gravities / BTU of Commingle production were calculated in two steps:

- (1) The production from existing wells in each Pool were calculated to arrive at an average value for BOPD. The percentage of the commingle production ("PCP") contributed by each individual Pool was calculated by dividing each Pool's production by the total commingle production from all three Pools.
- (2) The net commingle gravity contributed from each pool was calculated by multiplying the average Non-Commingle gravity for each Pool by that Pool's PCP. The "Average Gravity for Commingle Production" is the sum total of the net commingle gravity for all three pools.

Application for Surface Pool and Lease Commingling (Diverse Ownership)**(A) POOL COMMINGLING****(4) Production Measurement and Allocation:****Part 1 – Measurement Type:**

Production from the Commingled Areas will be metered at each well, pursuant to NMAC 19.15.12.10.C(1), using one of two methods to ensure that all production can be properly and accurately allocated back to the respective source Lease. The measurement method used for allocation depends on whether oil will be trucked or piped from the well pad to the Central Liquids Facility ("CLF"). Both methods comply with applicable law and ensure accurate measurements for reporting purposes. The proposed commingling will not reduce the value of production from each well. Commingling is the most efficient means of producing the reserves.

Method #1 – Piped Production Measurement

This method of measurement will apply to DJR's wells that are located on a pad where current or future pipeline infrastructure exists to transport the produced oil and water directly from the well pad to the CLF. For those wells/pads, all produced oil will be separated and measured on site using Coriolis meters. The Coriolis meters will be installed on the downstream side of the Vapor Recovery Tower (VRT) and upstream of production storage tanks to allow tie-back of the production to each producing well – and collectively a given pad – on a daily basis. Produced water will be measured using magnetic "Mag" meters. Once metered, the oil and water will be recombined into tanks located on the respective well pad. The combined oil and water will then be transported by pipeline to the CLF where it will be commingled. The commingled oil will then be separated and sold using an onsite sales Lease Automatic Custody Transfer unit ("LACT") near Marathon's market pipeline. Produced water will be injected into DJR's NAU SWD #1 which is located at the CLF.

Method #2 – Trucked Production Measurement

This method of measurement will apply to DJR's wells where pipeline infrastructure does not exist. In that case, the given pad(s) are or will be equipped with trucking load-out capabilities for transportation to the CLF. For all wells in which production will be transported by truck, DJR will follow all regulatory requirements under NMAC 19.15.23.8 for removing production from tanks for sale and transportation by truck and all requirements for oil measurement and ticketing of trucked barrels regardless of offloading destination.

Application for Surface Pool and Lease Commingling (Diverse Ownership)**(A) POOL COMMINGLING****(4) Production Measurement and Allocation:****Part 2 – Allocation Method:**

“Piped Wells” means those wells using Measurement Method #1 – Piped.

“Trucked Wells” means those wells using Measurement Method #2 – Trucked.

“Piped Production” means the total combined barrels produced from all associated Piped Wells, as originally measured (Measurement Method #1 – Piped).

“Piped Production Sold” means the remaining amount of Total Production Sold after deducting Trucked Production.

“Trucked Production” means the total combined barrels produced from all associated Trucked Wells, as originally measured (Measurement Method #2 – Trucked).

“Total Production Sold” means the total combined barrels from both Piped Wells and Trucked Wells sold at the sales LACT located on NAU CLF.

Allocation of Total Production Sold:**(1) Piped Wells**

Share of Total Production Sold which is allocated among Piped Wells is an amount equal to the total production remaining after subtracting Trucked Production from Total Production Sold (*“Piped Production Sold”*).

Each Piped Well receives allocation of a percentage of the Piped Production Sold based on the ratio between such Piped Well’s original measured production (Measurement Method #1) to the Total Piped Production.

(2) Trucked Wells

Each Trucked Well receives allocation share of Total Production Sold equal to such Trucked Well’s original measured production (Measurement Method #2), without reduction.

SEE EXAMPLE ATTACHED

This theoretical example demonstrates the allocation method using hypothetical production numbers. Using Measurement Method #1 and Measurement Method #2 it shows 9,500 bbls of Total Measured Production, with 9,200 bbls of Total Production Sold. The hypothetical 300 bbl difference between Total Measured Production and Total Production Sold is primarily due to unavoidable normal gas vapor losses of piped production, Basic Sediment and Water (“BS&W”) removal, and temperature changes. For trucked volumes, any normal gas vapor losses would have already occurred by the time the oil is hauled to the Central Liquids Facility, therefore, there is no adjustment made between the barrels produced and barrels sold for Trucked Wells. Accordingly, the 300 bbl difference in the attached example will be applied on a percentage basis to reduce production volumes on all Piped Wells as demonstrated in the calculations.

Should NAU CLF reach capacity or become non-operational due to an emergency or other reason, NMOCD will be notified as soon as reasonably possible. In such event, DJR requests authority to temporarily truck all or some production from the Lease(s) to Western's Lybrook Facility located along U.S. Highway 550. DJR will utilize the same measurement methods to ensure accurate reporting. DJR agrees to keep NMOCD informed during any period in which the NAU CLF is non-operational and agrees to take all reasonable steps within its control to resume deliveries.

Good afternoon Dean,

I searched OCD website and I checked with our Regulatory group and confirmed that the wells listed with no current API # on the DJR North Alamo Unit CLF Surface Commingling Application are still pending permit approval. There are no new API numbers to add to the application.

The location of the Western Lybrook Facility mentioned in the application, which is along Highway 550, is NENE of Section 15, T23N-R7W, Rio Arriba County, NM.

Please let me know if you need anything further.

Thank you for your time and consideration to this application.

Regards,

Good afternoon Dean,

The attached PDF file is titled Attachment 4-1 which contains the Well Diagrams for each of the DJR wells listed in the C107B Commingling application filed recently with your office for DJR's North Alamito Unit Central Liquids Facility. The wells are divided into groups by unit / lease / pool consistent with the listings on Attachment 2 previously submitted with the application.

This file is submitted to per your earlier request regarding this application:

1. The diagrams on the attached file include the flow of production off each well pad
2. The quarter/quarter locations for each pad are identified Well Pad Name shown both in Attachment 2 and the diagrams in Attachment 4-1. The quarter/quarter letter is part of the Well Pad Name. Example :
Betonnies Tsosie Wash Unit (BTWU) M11 2308 Pad = SWSW of Section 11, 23N-8W
3. Please note on the Attachment 2 in the well listings for the NAU Pad I01 2208 only three wells are listed, however, on the Well Pad Diagram, the 408H well is identified. The NAU 408H well has been plugged and abandoned.

DJR would request a phone conference with you on Monday 3/21/2022 at the time convenient to your schedule for a brief discussion on this application. Please advise as to a time on Monday that would fit your schedule and we will call you directly.

Thank you for your time and consideration to this application.

**STATE OF NEW MEXICO
ENERGY, MINERALS AND NATURAL RESOURCES DEPARTMENT
OIL CONSERVATION DIVISION**

**APPLICATION FOR SURFACE COMMINGLING
SUBMITTED BY DJR OPERATING, LLC**

ORDER NO. PLC-808

ORDER

The Director of the New Mexico Oil Conservation Division (“OCD”), having considered the application and the recommendation of the OCD Engineering Bureau, issues the following Order.

FINDINGS OF FACT

1. DJR Operating, LLC (“Applicant”) submitted a complete application to surface commingle the oil production from the pools, leases, and wells identified in Exhibit A (“Application”).
2. Applicant proposed a method to allocate the oil production to the pools, leases, and wells to be commingled.
3. To the extent that ownership is identical, Applicant submitted a certification by a licensed attorney or qualified petroleum landman that the ownership in the pools, leases, and wells to be commingled is identical as defined in 19.15.12.7.B. NMAC.
4. To the extent that ownership is diverse, Applicant provided notice of the Application to all persons owning an interest in the oil production to be commingled, including the owners of royalty and overriding royalty interests, regardless of whether they have a right or option to take their interests in kind, and those persons either submitted a written waiver or did not file an objection to the Application.
5. Applicant provided notice of the Application to the Bureau of Land Management (“BLM”) or New Mexico State Land Office (“NMSLO”), as applicable.
6. Applicant certified the commingling of oil production from the pools, leases, and wells will not in reasonable probability reduce the value of the oil production to less than if it had remained segregated.
7. Applicant in the notice for the Application stated that it sought authorization to add additional pools, leases, and wells and identified the parameters to make such additions.
8. Applicant stated that it sought authorization to surface commingle and off-lease measure, as applicable, oil production from wells which have not yet been approved to be drilled, but will produce from a pool and lease identified in Exhibit A.

CONCLUSIONS OF LAW

9. OCD has jurisdiction to issue this Order pursuant to the Oil and Gas Act, NMSA 1978, §§ 70-2-6, 70-2-11, 70-2-12, 70-2-16, and 70-2-17, 19.15.12. NMAC, and 19.15.23. NMAC.

10. Applicant satisfied the notice requirements for the Application in accordance with 19.15.12.10.A.(2) NMAC, 19.15.12.10.C.(4)(c) NMAC, and 19.15.12.10.C.(4)(e) NMAC, as applicable.
11. Applicant satisfied the notice requirements for the Application in accordance with 19.15.23.9.A.(5) NMAC and 19.15.23.9.A.(6) NMAC, as applicable.
12. Applicant's proposed method of allocation, as modified herein, complies with 19.15.12.10.B.(1) NMAC or 19.15.12.10.C.(1) NMAC, as applicable.
13. Commingling of oil production from state, federal, or tribal leases shall not commence until approved by the BLM or NMSLO, as applicable, in accordance with 19.15.12.10.B.(3) NMAC and 19.15.12.10.C.(4)(h) NMAC.
14. Applicant satisfied the notice requirements for the subsequent addition of pools, leases, and wells in the notice for the Application, in accordance with 19.15.12.10.C.(4)(g) NMAC. Subsequent additions of pools, leases, and wells within Applicant's defined parameters, as modified herein, will not, in reasonable probability, reduce the commingled production's value or otherwise adversely affect the interest owners in the production to be added.
15. By granting the Application with the conditions specified below, this Order prevents waste and protects correlative rights, public health, and the environment.

ORDER

1. Applicant is authorized to surface commingle oil production from the pools, leases, and wells identified in Exhibit A.

Applicant is authorized to store and measure oil production off-lease from the pools, leases, and wells identified in Exhibit A at a central tank battery described in Exhibit A.

Applicant is authorized to surface commingle oil production from wells not included in Exhibit A but that produce from a pool and lease identified in Exhibit A.

Applicant is authorized to store and measure oil production off-lease from wells not included in Exhibit A but that produce from a pool and lease identified in Exhibit A at a central tank battery described in Exhibit A.

2. The allocation of oil production to wells not included in Exhibit A but that produce from a pool and lease identified in Exhibit A shall be determined in the same manner as to wells identified in Exhibit A that produce from that pool and lease, provided that if more than one allocation method is being used or if there are no wells identified in Exhibit A that produce from the pool and lease, then allocation of oil production to each well not included in Exhibit A shall be determined by OCD prior to commingling production from it with the production from another well.
3. The oil production for each well identified in Exhibit A shall be separated and metered prior to commingling.

4. Applicant shall measure and market the commingled oil at a central tank battery described in Exhibit A in accordance with this Order and 19.15.18.15. NMAC or 19.15.23.8. NMAC.
5. Applicant shall calibrate the meters used to measure or allocate oil production in accordance with 19.15.12.10.C.(2) NMAC.
6. If the commingling of oil production from any pool, lease, or well reduces the value of the commingled oil production to less than if it had remained segregated, no later than sixty (60) days after the decrease in value has occurred Applicant shall submit a new surface commingling application to OCD to amend this Order to remove the pool, lease, or well whose oil production caused the decrease in value. If Applicant fails to submit a new application, this Order shall terminate on the following day, and if OCD denies the application, this Order shall terminate on the date of such action.
7. Applicant may submit an application to amend this Order to add pools, leases, and subsequently drilled wells with spacing units adjacent to or within the tracts commingled by this Order by submitting a Form C-107-B in accordance with 19.15.12.10.C.(4)(g) NMAC.
8. If a well is not included in Exhibit A but produces from a pool or lease identified in Exhibit A, then Applicant shall submit Forms C-102 and C-103 to the OCD Engineering Bureau after the well has been approved to be drilled and prior to off-lease measuring or commingling oil or gas production from it with the production from another well. The Form C-103 shall reference this Order and identify the well and proposed method to determine the allocation of oil production to it.
9. Applicant shall not commence commingling oil or gas production from state, federal, or tribal leases until approved by the BLM or NMSLO, as applicable.
10. If OCD determines that Applicant has failed to comply with any provision of this Order, OCD may take any action authorized by the Oil and Gas Act or the New Mexico Administrative Code (NMAC).
11. OCD retains jurisdiction of this matter and reserves the right to modify or revoke this Order as it deems necessary.
